What is a Chromebook?

A Chromebook is a portable computer that is optimized for internet use. By removing complex functions, it allows you to perform Web-based tasks faster than a traditional notebook. Complex features of the existing computer are removed, so you can surf the Web faster. Built-in security system does not bother users to upgrade the Chromebook to the latest version. The user’s information is always protected safely. The web-based applications such as the documents, presentations, spreadsheets, and more are also available.

Traditional Notebook vs. Chromebook

Connecting to the Internet

To use Chromebook, connect to the internet first.

Using a wireless network

Chromebook provides two types of wireless networking.

- Normal: 802.11 a/b/g/n
- Secured: WEP, WPA/WPA2

1. Click the network icon on the top right corner.
2. Select **Use Wi-Fi** to search and connect to a wireless network automatically.

When a wireless network is already connected, you will see the message: **Stop**

3. To connect to another network, select **Join other network**.
4. Enter SSID and password.
5. Click **Connect**.
6. When the connection is successfully finished, you can see this icon.

- When the network connection fails, you will see this icon.
- The number of activated bars in network icon indicates the strength of the network signal.
1 Getting Started

Using a wired network

1. Connect the USB internet adapter.

   The USB internet adapter should support the Linux system.

2. Click the network icon on the top right corner.

3. Select Ethernet to search and connect to a wired network automatically.
Creating a Google Account

Chromebook recommends logging in by using your Google account. If you don’t have a Google account, create one first.

2. Enter the information, and click I accept. Create my account.

Signing In

Signing in with Google account

If the notebook is already connected to the internet, log in to the Google account during start-up. If the internet is not connected, you can log on as a guest.

When you log in with your Google ID, you are automatically logged on to the Google site. You can use the various Google features such as Gmail, Google Calendar, Google Docs. Bookmarks, extensions, and other browser settings are also saved into your account. This makes it possible for you to load the settings automatically when you log on from another Chromebook.

1. Press the power button on the keyboard.
2. Click add icon .
3. Enter email address and password for your Google account.
4. Click Log in.
1 Getting Started

Signing in as a guest

When the network is not connected, you do not have a Google account, or you are temporarily renting a notebook, you can sign in as a guest. Click the guest icon when you boot up.

The administrator can disable the guest sign-in feature.

Viewing Help

Visit www.google.com/support/chromeos. You can learn how to use Chromebook. When you need help using Chromebook, you also can search by using a keyword and find troubleshooting advice.
2 Using Chromebook

- Using browsers
- Using shortcuts
- Printing
- Using Google Chrome web store
Using browsers

Tab (Ctrl+T)
To open a new tab, click on the Add icon at the top of the browser.

Incognito window
In incognito mode, the websites that you have visited and the files that you have downloaded are not recorded in the history. Bookmarks and settings can still be saved.

To open an Incognito window, perform the following:

1. Click the wrench icon on the top right corner.
2. Select **New incognito window**.

- You can also log in as a guest to avoid leaving history.
- The website can still record your search keywords and download history in the website's account (not in the notebook).
2. Using Chromebook

**Prediction service**

Enter a keyword in the address bar, and then Google Chrome will predict possible websites or suggest extended keywords. For example, if you type *New York*, then the address bar can show *New York Times*, *New Yorker*, or *http://www.nytimes.com*.

- **Disable the prediction service**
  1. Click the wrench icon on the top right corner, and select *Settings*.
  2. Un-check *Use a prediction service to help complete searches and URLs typed in the address bar* From *Under the Hood > Privacy*.

**Bookmarks**

- **Adding a bookmark (keyboard shortcut: Ctrl+D)**
  Add your favorite websites to bookmarks, and then you can quickly visit the websites.
  1. Press *Ctrl+D* or click on the star icon.
  2. A dialog appears to confirm the addition.
  3. Enter the bookmark name.
  4. Select a save *Folder*.
  5. Click *Close* to finish.

- **Using bookmarks**
  The bookmarks are shown in the bookmark bar on the top of the browser. Click bookmark to navigate to a website quickly.
2. Using Chromebook

Search

Chromebook provides the following convenient searching features:

- **The Search button**: Chromebook provides a search key on the keyboard. When you press this key, a new tab opens. Type the keyword on the address bar, and then press the Enter key. Search results appear on the display.
- **Clicking the right mouse button**: Select the keyword to search, and then click on the right mouse button. Select Search Google for 'keyword' to start searching.
- **Paste and search**: Copy the keyword you want to use for your search, and then click on the right mouse button on the address bar. Select Paste and search to start your search.
- **Select and drag**: Select the keyword, and then drag it to the address bar. The result appears on the display after automatic searching.

File downloading and storing webpages

- **Downloading files**: Click a file link to download. You can also click on the right mouse button and select Save as. The files are automatically stored in the Downloads folder.
- **Storing web pages (Ctrl+S)**: Press Ctrl+S to save web page. The files are automatically stored in the Downloads folder.
- **Opening downloaded files (Ctrl+O)**: After you download a file, the Downloads folder appears on the bottom right of the browser. When you click on a file, a proper web-based viewer automatically runs to open the file. The compatible file types are .doc, .pdf, .html, .jpg and .gif, and vary from the Chrome OS version.
### Refreshing the browser

Chromebook provides a refresh button on the keyboard. Click on this button when you want to refresh the browser view.

### Checking a webpage’s security

When you connect to a webpage, Chrome browser can show you the status of internet connection, if the internet connection is not fully secured.

Printing

Chromebook supports Google Cloud Print service. If your printer supports the Google Cloud Print service, you can print without installing the driver in your Chromebook. If your printer does not support Cloud Print, you need a Windows computer. Then follow the steps below:

Connecting my printer to Google Cloud Print

2. Install the printer driver on the Windows computer.
3. Install Google Chrome browser on the Windows computer.
4. Run the Google Chrome browser.
6. Click the wrench icon on the top right corner.
7. Click **Options > Under the Hood** tab > **Google Cloud Print** > **Sign in to Google Cloud Print**.
8. Sign-in to your Google account.
9 When you see the Success page, click OK. To print a test page, click Print a Test Page.

10 Click Print a Test Page again.
11. Select a printer to use from the list.

12. Click **Print**.

13. When the printer works normally, it means that the Google Cloud Print service is enabled.

14. Use the printer from your Google Chromebook.

- Google Cloud Print service registers the printers in your Google account. If you share the Google Chromebook with others, each member has to enable their own service with their Google account.
**Printing**

1. Sign-in to your Google account where the printer is registered to the Google Cloud Print service.
2. Press **Ctrl+P** from keyboard.
3. A printer list dialog appears.
4. Select a printer to use, and click **Options** if you want to change the options.
5. Click **Print** to start printing.

- If the printer or the proxy computer connected to the printer is off, then the printing job is stored in your Google account.
- When the printer is ready, the stored jobs are automatically printed out. Visit [https://www.google.com/cloudprint/manage.html](https://www.google.com/cloudprint/manage.html) to see the printing jobs.
Using Google Chrome web store

Google provides Chrome Web Store to buy and install applications, extensions, and themes.

- Upgrade to the latest Chrome browser before using Google Web Store.
- Google Web Store navigation can be different depending on the browser version or the system environment.
- Some applications in Google Web Store may not support Chrome OS.

- **Apps**: The application programs to run on the browser. For example, you can install the specific apps to send an email, edit documents, play music, or edit photos.
- **Extensions**: Additional features such as post-it for memo or game to run while using the web site.
- **Themes**: Background image for the browser.
Installing items from web store

1 Visit http://chrome.google.com/webstore.
2. Using Chromebook

2. Select **Apps, Extensions**, or **Themes** to install.

3. Click **Install**.
2. Using Chromebook

4. You can see the progress of installation.

- **Apps**: When you open a new tab, you can see the new application icon on the browser.

- **Extensions**: You can see the new extension's icon on toolbar.

- **Themes**: The background image of the browser will be changed.
3 Changing Configurations

- Various setups
- Customizing the browser option
- Removing the browser history
- Setting up the bookmark
### Various setups

</tr>
<tr>
<td><strong>Remembered networks</strong></td>
<td>Displays network items that have been connected before.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Forget this network</strong>: Remove the network item list.</td>
</tr>
</tbody>
</table>
### Privacy
- **Cookies**: Allow or block creating cookies. Cookies are created when you visit a web site. They include the temporary record such as login information. Allowing cookies helps simple sign-in, but it increases the chance of information leakage.
- **Images**: Allow or block the displaying of images.
- **JavaScript**: Allow or block JavaScript-included web page.
- **Plug-ins**: Some contents such as flash or movies embedded in a website need additional plug-ins to play. You can set Chrome to install the plug-ins automatically.
- **Pop-ups**: Allow or block pop-ups.
- **Location**: Allow or ignore the request of the location service.
- **Notifications**: Allow or block websites from sending notification to the notebook.

### Web Content
Set the font type, font size, and page zoom used to display the web page.

### Network
You can use the computer's system proxy settings to connect to the network. It protects your information and enhances network speed.

### Translate
Enable the translation bar on the top of the browser window. If the languages between the web contents and OS are different, it asks whether you want to translate or not.

### Security
Setup and manage the security certificate. You can decide whether you use SSL 3.0 or TLS 1.0.
- **Manage certificates**: You can manage the certificates to identify users, servers, or certificate organization.
3. Changing Configurations

<table>
<thead>
<tr>
<th><strong>Users</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Enable guest browsing</strong></td>
<td>Allow or block guest log-in.</td>
</tr>
<tr>
<td><strong>Show usernames and photos on the sign-in screen</strong></td>

</tr>
<tr>
<td><strong>Restrict sign-in to the following users</strong></td>
<td>Permit access only to registered users.</td>
</tr>
</tbody>
</table>
3. Changing Configurations

Customizing the browser option

Setting up a default search engine

1. Click the wrench icon on the top right corner, and select **Settings**.
2. Click **Basics > Search**, and Select a search engine from the dropdown list. Or click **Manage search engines…** > select a search engine > **Make default**.

You can add a new search engine from Manage search engines:

- **Add a new search engine**: Enter a nickname.
- **Keyword**: Enter the address to link with a search engine.
- **URL with %s in place of query**:
  1. Navigate to the search engine you want to add.
  2. Search a keyword. Example) **XYZ**
  3. You can see the address of the search result page. Example) **http://www.google.com/search?q=XYZ**
  4. Copy the address and paste it to a **URL with %s in place of query**. Replace the keyword (Example: **XYZ**) to %s. Example) **http://www.google.com/search?q=%s**
3. Changing Configurations

**Removing the browser history**

1. Click the wrench icon  on the top right corner, and select Settings.
2. Click checkbox on Clear browsing history from Tools > Clear browsing data.
3. Select Clear data from this period to remove the data of specific period, and select Everything to remove all.
4. Click Clear browsing data.

**Setting up the bookmark**

**Always showing the bookmarks bar (keyboard shortcut: Ctrl+Shift+B)**

1. Click the wrench icon  on the top right corner.
2. Select Tools > Always show bookmarks bar.

**Importing bookmarks**

1. Click wrench icon  on the browser toolbar.
2. Select Bookmark manager > Organize.
3. Click Import bookmarks.
4. Select a file that contains the bookmark list to import.
3. Changing Configurations

Exporting bookmarks

1. Click wrench icon on the browser toolbar.
2. Select Bookmark manager > Organize.
3. Select Export bookmarks.
4. Select a location to export, and click Save.
4 FAQ

- Login
- Network setting
- Printing
Q1: "Sorry, your password could not be verified." Message appears.

Reason 1: You have entered a wrong e-mail address or a password.

Solution 1:
- Check your email address and password.
  - If you forgot the password, click [http://www.google.com/accounts/recovery](http://www.google.com/accounts/recovery) to initialize the password.

Reason 2: Internet connection is not working.

Solution 2:
- Sign in as a guest, and then check the network settings.
- Ask the network administrator about the network connection.
- Enable the proxy settings from **Settings > Under the Hood > Network**. Ask the network administrator for the proxy server and port number.
Network setting

Q1: Cannot connect to the network.

Reason 1: The wireless network password is not entered correctly.
Solution 1
- Confirm the password again, and enter it again. If you do not remember the password, ask your network administrator.

Reason 2: Wireless network Signal that you select is too weak.
Solution 2
- Try another network. If you have no other wireless network, try a wired network by using the USB Ethernet adapter.

Reason 3: If you are using a network in a school or a company, you may have to setup the proxy.
Solution 3
- Enable the proxy settings from Settings > Under the Hood > Network. Ask the network administrator for the proxy server and port number.
Printing

**Q1: Cannot print**

**Reason** Google Cloud Print cannot find the printer.

**Solution**
- Make sure the printer is powered on.
- Make sure that you signed-in to your registered Google Cloud Print account.
- If the printer is directly connected to a Windows computer, turn on the Windows computer.

**Q2: Cannot see my printer from the Google Cloud Print list.**

**Reason 1** You are signed-in to the wrong account.

**Solution 1**
1. Click the wrench icon on the top right corner.
2. Check the email address that you used to sign in.
3. Check the email address that you used to registered the printer with Google Cloud Print from **Settings > Under the Hood > Google Cloud Print**.
4. Confirm that the two email addresses are the same.
Reason 2 The printer is not correctly registered at Google Cloud Print.

Solution 2
1. Log on to the Windows computer that the printer connected with.
3. Click *Print test page*.
4. If the test page is not correctly printed, connect your printer again to **Google Cloud Print Service**.
