HEALTH WARNING

Use of a keyboard or mouse may be linked to serious injuries or disorders.

When using a computer, as with many activities, you may experience occasional discomfort in your hands, arms, shoulders, neck, or other parts of your body. However, if you experience symptoms such as persistent or recurring discomfort, pain, tingling, burning, numbness, or swelling, or if the pain is not felt in the area you are using your mouse or keyboard, immediately cease your activity and consult a healthcare professional. You may be experiencing symptoms of a musculoskeletal disorder (MSD). It is important to be aware of factors that could trigger such conditions and the precautions that you can take to help prevent them. MSDs can result from jobs or recreational activities that require you to work with a computer, along with posture and work habits that put unnecessary strain on your body. By making small changes to how you spend your time working and resting, you can lower the risk of MSDs. Sometimes you are not aware of what factors may be linked to their occurrence, including: overall health, stress and how one copes with it, medical and physical conditions, and how a person positions and uses his or her body during work and other activities. Further, MSDs may be associated with other health problems, including: sleep disorders, depression, and/or anxiety.

Some guidelines that may help you work more comfortably with your computer and possibly reduce your risk of experiencing an MSD can be found in the “Healthy Computing Guide” installed with this device’s software. If this device did not come with software, see the “Healthy Computing Guide” section of the “Getting Started” manual. You can also access the “Healthy Computing Guide” at www.microsoft.com/hardware or (in the United States only) by calling 1 (800) 365-7515 to request a CD art to share.

If you have questions about how your own lifestyle, activities, or medical or physical condition may be related to MSDs, consult a qualified health professional.

**Adjusting the Keyboard Legs**

The keyboard legs are designed to accommodate various body sizes, chairs, and desks.

- Pull out or push in the keyboard legs to a position that minimizes bending of your wrists while typing.

**Attaching and Detaching the Palm Lift** (some keyboard models only)

The optional palm lift is designed to help provide more natural wrist alignment and comfort while typing.

- Turn the keyboard over and slide the tabs on the palm lift into or out of the slots in the keyboard. If you're attaching the palm lift, make sure you slide the tabs all the way in until they snap securely into place.

**About the Keyboard Lights**

The keyboard lights indicate the status of the toggle keys, such as NUM LOCK or CAPS LOCK. For example, if NUM LOCK is on, the NUM LOCK light is on; if CAPS LOCK is off, the CAPS LOCK light is off. Some keyboard models may use an on-screen display (rather than a light) to indicate the status of certain toggle keys.

**Using the F LOCK Key**

The F LOCK toggle key gives your keyboard more functionality by providing two command modes for the top row of keys. When F LOCK is off, the alternate commands printed on the top of the keys are enabled. You may need to turn F LOCK on to access certain system key commands labeled on the front of the keys, such as INSERT or SCROLL LOCK.
