Troubleshooting

If you are experiencing trouble with the LCD display, refer to the following. If the problem persists, please contact your local dealer or our service center.

Problem: No image appears on screen.
- Check that all the I/O and power connectors are correctly and well connected as described in the “Installation” section.
- Make sure the pins of the connectors are not crooked or broken.

Problem: Partial Image or incorrectly displayed image.
- Check to see if the resolution of your computer is higher than that of the LCD display.
- Reconfigure the resolution of your computer to make it less than or equal to 1280 x 1024.

Problem: Image has vertical flickering line bars.
- Use "Clock" to make an adjustment.
- Check and reconfigure the display mode of the vertical refresh rate of your graphic card to make it compatible with the LCD display.

Problem: Image is unstable and flickering
- Use "Phase" to make an adjustment.

Problem: Image is scrolling
- Check and make sure the VGA signal cable (or adapter) is securely connected.
- Check and reconfigure the display mode of the vertical refresh rate of your graphics card to make it compatible with the LCD Display.

Problem: Vague image (characters and graphics)
- Use “Clock” to make an adjustment. If this problem still exists, use “Phase” to make an adjustment.
Warning Signal

If you see warning messages on your LCD screen, this means that the LCD display cannot receive a clean signal from the computer graphics card.

There may be three sources for this problem. Please check the cable connections or contact Planar for more information.

› No Signal
This message means that the LCD Display has been powered on but it cannot receive any signal from the computer graphics card. Check all the power switches, power cables, and VGA signal cable.

› Going to sleep
The LCD is under the power saving mode, in addition, the LCD will go into this sleep mode when experiencing a sudden signal disconnecting problem.

› Out of Range
This message means that the signal of the computer graphic card is not compatible with the LCD display. When the signal is not included in the “Video Modes” list we have listed in the Appendices of this manual, the LCD display will display this message.

Touch Screen Driver Installation

Driver Installation Process:

1. Before you start to install the touch driver, please be sure the USB or the RS-232 Serial cable is connected from the PC to the LCD display.
2. Uninstall any touch screen driver that may be on your system.
3. Click on the driver link found on the CD-ROM.
4. Follow instructions as found below.
5. After installation is complete, click “Finish” and restart your computer to complete installation.

PT1700MX Driver Install:
Please Note: The PT1700MX is available with both RS232 and USB connections. The touch driver is located on the enclosed CD-ROM for these OS: Windows® VISTA 64/32 bits, XP, 2000, ME, 98, XP Embedded, Linux, WinCE.NET. If you are using RS232 connection, follow the instructions below:
1. Be sure that RS232 cable is connected to the computer.
2. Power on the computer.
3. Load the touch screen driver CD.
4. Follow the step-by-step instructions as shown on pop-up windows.

If you are using a PC running Windows® VISTA, follow the instructions below:
1. Be sure that USB cable is connected to the computer.
2. Power on the computer.
3. No need to install USB driver from the CD as it is a HID device. The system will recognize the HID device and load the driver automatically.
Please note: Do not plug in both RS232 and USB cables. Doing so may cause a driver conflict, making your touch screen idle.

If you are using USB connection on a PC using an operating system other than Windows® Vista, follow the instructions below:
1. Be sure that USB cable is connected to the computer.
2. Power on the computer.
3. Load the touch screen driver CD.
4. Follow the step-by-step instructions as shown on pop-up windows.

**PT1705MU Driver Install:**
