Features

The SNC-P1 is a network camera equipped with a built-in Web server. The camera has the following features:

Monitoring using the Web browser
Real-time monitoring of the image and sound from the camera is possible using the Web browser on the computer.

MPEG4 video compression
MPEG4 video compression allows a smooth streaming of motion pictures with 30 fps (QVGA size). Motion JPEG video streaming is also possible by selecting the JPEG video compression format.

Offering video streaming in VGA size
The 1/4 type CCD supporting VGA offers high-quality video streaming in VGA size. (The frame rate in VGA size is less than 30 fps.)

Built-in microphone
A microphone (monaural) is built in the camera. Also, the built-in microphone jack (minijack, monaural) accepts a commercially available plug-in-power microphone (rated voltage: 2.0V DC).

External speaker system can be connected
The line output jack (minijack, monaural) allows connection of a commercially available speaker system with the built-in amplifier so that the sound transmitted via the network can be output from the connected speaker system.

Sending the image and controlling peripheral devices by synchronizing with the alarm
The camera is equipped with the motion detection function (in MPEG4 mode), a sensor input terminal and an alarm output terminal. You can send images from the camera as an E-mail attachment or to an FTP server by synchronizing with motion detection or external sensor input, or control peripheral devices connected to the alarm output terminal.

Image flip function
The image flip function allows rotation of images from the camera by 180 degrees according to the installation location of the camera.
**Supplied IP Setup Program**

The camera is supplied with the IP Setup Program for easy performance of the network setting.

**NOTICE TO USERS**

---

**Phenomena Specific CCD Image Sensors**

The following phenomena that may appear in images are specific to CCD (Charge Coupled Device) image sensors. They do not indicate malfunctions.

**White flecks**

Although the CCD image sensors are produced with high-precision technologies, fine white flecks may be generated on the screen in rare cases, caused by cosmic rays, etc.

This is related to the principle of CCD image sensors and is not a malfunction.

The white flecks especially tend to be seen in the following cases:
- when operating at a high environmental temperature
- when you have raised the gain (sensitivity)
- when using the slow shutter

**Vertical smear**

When an extremely bright object, such as a strong spotlight or flashlight, is being shot, vertical tails may be produced on the screen, or the image may be distorted.

**Aliasing**

When fine patterns, stripes, or lines are shot, they may appear jagged or flicker.
How to Use This User’s Guide

This User’s Guide explains how to operate the SNC-P1 Network Camera from a computer. The User’s Guide is written to be read on the computer display. As this section gives tips on using the User’s Guide, read it before you operate the camera.

Jumping to the related page
When you read the User’s Guide on the computer display, click on the sentence to jump to the related page.

Software display examples
Note that the displays shown in the User’s Guide are explanatory examples. Some displays may be different from the ones which appear as you operate the application software.

Printing the User’s Guide
Depending on your system, certain displays or illustrations in the User’s Guide, when printed out, may differ from those as portrayed on your screen.

Installation Manual (printed matter)
The supplied Installation Manual describes the names and functions of parts and controls of the Network Camera, connecting examples and how to set up the camera. Be sure to read the Installation Manual before operating.

System Requirements

These are the requirements for the computer that displays the image or controls the camera.

Processor
Intel Pentium III 1 GHz or higher (Intel Pentium IV, 2 GHz or higher recommended)

RAM
256 MB or more

OS
Microsoft Windows 2000, Windows XP, Windows Vista

Web browser
Microsoft Internet Explorer Ver. 6.0 or later
The Preparation section explains what the administrator has to prepare for monitoring the images after installation and connection of the camera.

Assigning the IP Address to the Camera

To connect the camera to a network, you need to assign a new IP address to the camera when installing the camera for the first time.

You can assign an IP address in two ways:

- Using the setup program stored in the supplied CD-ROM (see page 7)
- Using the ARP (Address Resolution Protocol) commands (see page 74)

This section explains how to assign an IP address to the camera using the supplied setup program and how to configure the network.

Before starting, connect the camera, referring to “Connections” in the supplied Installation Manual. Consult the administrator of the network about the assigned IP address.

Note
- The IP Setup Program may not operate correctly if you use a personal firewall or antivirus software in your computer. In that case, disable the software or assign an IP address to the camera using another method. For example, see “Assigning the IP Address to the Camera Using ARP Commands” on page 74.
- If you are using Windows XP Service Pack 2 or Windows Vista, disable the Windows Firewall function. Otherwise the IP Setup Program will not operate correctly. For the setting, see “Configuring Windows Firewall” in “When using Windows XP Service Pack 2” on page 10 or “Configuring Windows Firewall” in “When using Windows Vista” on page 12.

Assigning an IP address using the IP Setup Program

1. Insert the CD-ROM in your CD-ROM drive. A cover page appears automatically in your Web browser. If it does not appear automatically in the Web browser, double-click on the index.htm file on the CD-ROM.

When you are using Windows Vista, pop-up “AutoPlay” may appear. For details, “Installing software” in “When using Windows Vista” on page 11.

2. Click the Setup icon of IP Setup Program. The “File Download” dialog opens.

When you are using Windows XP Service Pack 2 or Windows Vista, a message regarding the active contents may appear. For details, see “Installing software” in “When using Windows XP Service Pack 2” on page 9 or “Installing software” in “When using Windows Vista” on page 11.

3. Click Open.

Note
If you click “Save this program to disk” on the “File Download” dialog, you will not be able to perform set up correctly. Delete the downloaded file, and click the Setup icon again.

4. Install the IP Setup Program on your computer using the wizard.

If the Software License Agreement is displayed, read it carefully and click Accept to continue with the installation.

5. Start the IP Setup Program.

When you are using Windows Vista, message “User Account Control – An unidentified program wants access to your computer” may appear. In this case, click Allow.

The program detects the network cameras connected to the local network and lists them on the Network tab window.
Assigning the IP Address to the Camera

6 Click on the camera in the list to which you want to assign a new IP address.

The network settings for the selected camera are displayed.

7 Set the IP address.

To obtain the IP address automatically from a DHCP server:
Select **Obtain an IP address automatically**.

The IP address, Subnet mask and Default gateway are assigned automatically.

To specify the IP address manually:
Select **Use the following IP address**, and type the IP address, Subnet mask and Default gateway in the relevant boxes.

8 Set the DNS server address.

To obtain the DNS server addresses automatically:
Select **Obtain DNS server address automatically**.

To specify the DNS server addresses manually:
Select **Use the following DNS server address**, and type the Primary DNS server address and Secondary DNS server address in the relevant boxes.

9 Set the HTTP port No.

Normally, select **80** for the HTTP port No. To use another port number, type the port number between 1024 and 65535 in the text box.

10 Type the Administrator name and Administrator password.

The factory settings of both items are “admin.”

You cannot change the Administrator name and Administrator password in this step. To change these items, see “Setting the User — User setting Menu” on page 41.

11 Confirm that all items are correctly set, then click **OK**.
If “Setting OK” is displayed, the IP address is correctly assigned.

To access the camera directly, double-click the camera name in the list.

<table>
<thead>
<tr>
<th>MAC address</th>
<th>IP address</th>
<th>Model</th>
<th>Serial No</th>
<th>Version No</th>
</tr>
</thead>
<tbody>
<tr>
<td>00-11-22-33</td>
<td>192.168.1.100</td>
<td>CDP 820</td>
<td>123456789</td>
<td>1.0.0.0</td>
</tr>
</tbody>
</table>

The welcome page of the network camera is displayed in the Web browser.

**Tip**
The factory setting of the camera network is as follows.
IP address: 192.168.0.100
Subnet mask: 255.0.0.0

The welcome page of the network camera is displayed in the Web browser.

**Note**
If the IP address is not set correctly, the welcome page does not appear after step 12. In this case, try to set the IP address again.

**When using Windows XP Service Pack 2**

**Installing software**
A warning message regarding the active contents may appear when you install software such as IP Setup Program from CD-ROM. In this case, operate as follows:

Example: In case of IP Setup Program

If message “Internet Explorer” appears, click Yes.

![Internet Explorer](image)

If message “File Download – Security Warning” appears, click Run.

![File Download – Security Warning](image)

**Note**
If you select Save in the “File Download – Security Warning” dialog, you will not be able to perform installation correctly. Delete the downloaded file, and click the Setup icon again.

If message “Internet Explorer – Security Warning” appears, click Run.

![Internet Explorer – Security Warning](image)

The software installation starts.

**Installing ActiveX Control**
During installation of ActiveX Control, the information bar or “Security Warning” may appear. In this case, operate as follows:
If message “Information Bar” appears, click OK.

If the information bar appears, click on the bar and select **Install ActiveX Control…**

The installation of ActiveX Control starts. When installation is completed, the main viewer or the Motion detection setting menu appears.

**Configuring Windows Firewall**

The IP Setup Program or SNC audio upload tool may not operate correctly depending on the configuration of Windows Firewall. (No cameras are shown in the list even if they are detected.) In this case, confirm the Windows Firewall configuration as follows:

Example: In case of IP Setup Program

1. Select **Control Panel** from the Start menu of Windows.
2. Select **Security Center** of the working field.

3. Select **Windows Firewall** and select **Off** in the Windows Firewall dialog.

The cameras will be displayed in the list.

If you want to keep Windows Firewall **On**, continue with the following steps.

4. Select the “Exceptions” tab.

5. Select **Add Program…**
In the Add Program dialog, select **IP Setup Program** and click **OK**.

Then the IP Setup Program is added to the Programs and Services list.

Click **OK**.

When the above procedure is completed, the cameras connected in the local network are displayed in the IP Setup Program.

**When using Windows Vista**

**Installing software**

A warning message regarding the active contents may appear when you install software such as IP Setup Program from CD-ROM. In this case, operate as follows:

Example: In case of IP Setup Program

If pop-up “AutoPlay” appears when a CD-ROM is inserted into the CD-ROM drive, click **Install or run program**.

If you click **Open folder to view files**, Web browser will not open automatically. In this case, double-click the “index.htm” file in the CD-ROM.

If message “Internet Explorer” appears, click **Yes**.

If message “File Download – Security Warning” appears, click **Run**.

If you select **Save** in the “File Download – Security Warning” dialog, you will not be able to perform
installation correctly. Delete the downloaded file, and click the Setup icon again.

If message “Internet Explorer – Security Warning” appears, click Run.

The software installation starts.

Starting the software
When you start software such as IP Setup Program, message “User Account Control – An unidentified program wants access to your computer” may appear. In this case, click Allow.

Installing ActiveX Control
During installation of ActiveX Control, the information bar or “Security Warning” may appear. In this case, operate as follows:

If message “Information Bar” appears, click OK.

If the information bar appears, click on the bar and select Install ActiveX Control…

If message “User Account Control – Windows needs your permission to continue” appear, click Continue.

If “Internet Explorer – Security Warning” appears, click Install.

The installation of ActiveX Control starts. When installation is completed, the main viewer or the Motion detection setting menu appears.

Configuring Windows Firewall
The IP Setup Program or SNC audio upload tool may not operate correctly depending on the configuration of Windows Firewall. (No cameras are shown in the list even if they are detected.) In this case, confirm the Windows Firewall configuration as follows:

Example: In case of IP Setup Program
1 Select Control Panel from the Start menu of Windows.
2 Click Windows Firewall.
3 Select Turn Windows Firewall on or off. “User Account Control – Windows needs your permission to continue” may appear. In this case, click Continue.
4 Select Off in the “General” tab.
The cameras will be displayed in the list. If you want to keep Windows Firewall On, continue with the following steps.

5 Select the “Exceptions” tab.

6 Select Add Program.…

7 If the Add Program dialog appears, select IP Setup Program and click OK.

Then the IP Setup Program is added to the Program or port list.

8 Click OK.

When the above procedure is completed, the cameras connected in the local network are displayed in the IP Setup Program.

---

**Accessing the Camera Using the Web Browser**

When the IP address has been assigned to the camera, check that you can actually access the camera using the Web browser installed in your computer.

Use Internet Explorer as the Web browser.

1 Start the Web browser on the computer and type the IP address of the camera in the URL box.

   ![Image](http://192.168.0.100/)

   The welcome page of the network camera is displayed in the Web browser.

2 Click Enter.

   The main viewer is displayed.

   ![Image](http://192.168.0.100/)

   When the main viewer is correctly displayed, the IP address assignment is completed.
When the main viewer of the camera is displayed for the first time

When you click Enter, “Security Warning” is displayed. When you click Yes, ActiveX control is installed and the main viewer is displayed.

Notes

- If Automatic configuration is enabled in the Local Area Network (LAN) Settings of Internet Explorer, the image may not be displayed. In that case, disable Automatic configuration and set the Proxy server manually. For the setting of the Proxy server, consult your network administrator.
- When you install ActiveX Control, you should be logged in to the computer as Administrator.
- When you are using Windows XP Service Pack 2 or Windows Vista, the information bar or “Security Warning” may appear as you click Enter. For details, see “Installing ActiveX Control” in “When using Windows XP Service Pack 2” on page 9 or “Installing ActiveX Control” in “When using Windows Vista” on page 12.

Tip

Every page of this software is optimized as display character size Medium for Internet Explorer.

To display the welcome page and the main viewer correctly

To operate the welcome page and the main viewer correctly, set the security level of the Internet Explorer to Medium or lower, as follows:

1. Select Tools from the menu bar for Internet Explorer, then select Internet Options and click the Security tab.

2. Click the Internet icon (when using the camera via the Internet) or Local intranet icon (when using the camera via a local network).

3. Set the slider to Medium or lower. (If the slider is not displayed, click Default Level.)

When using antivirus software, etc. on the computer

- When you use antivirus software, security software, personal firewall or pop-up blocker on your computer, the camera performance may be reduced, for example, the frame rate for displaying the image may be lower.
- The Web page displayed when you log in to the camera uses JavaScript. The display of the Web page may be affected if you use antivirus software or other software described above on your computer.
# Basic Configuration by the Administrator

You can monitor the image of the camera by logging in with the initial condition of this network camera. You can also set various functions according to the install position, network condition or purpose of the camera. We recommend you configure the following items before monitoring the image from the camera.

<table>
<thead>
<tr>
<th>Setting contents</th>
<th>Easy mode menu</th>
<th>Advanced mode menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select the white balance mode according to the installing position (indoor or outdoor).</td>
<td>White balance (page 26)</td>
<td>White balance (page 35)</td>
</tr>
<tr>
<td>Flip the image according to the installation position (desk top or ceiling).</td>
<td>Mount (page 26)</td>
<td>Image flip (page 35)</td>
</tr>
<tr>
<td>Select the brightness of the blue LED on the top of the camera.</td>
<td>Blue LED (page 26)</td>
<td>Blue LED (page 31)</td>
</tr>
<tr>
<td>Set the format of the image sent from the camera (MPEG 4 or JPEG).</td>
<td>–</td>
<td>Video mode (page 34)</td>
</tr>
<tr>
<td>Select the brightness of the image sent from the camera.</td>
<td>Brightness (page 26)</td>
<td>Exposure mode (page 36) Exposure brightness (page 36)</td>
</tr>
<tr>
<td>Select the quality of the image sent from the camera.</td>
<td>Image quality (page 26)</td>
<td>MPEG4 Tab (page 36) JPEG Tab (page 37)</td>

<tr>
<td>Make the setting for sending the monitor image attached to a mail.</td>
<td>e-Mail (SMTP) (page 26)</td>
<td>e-Mail (SMTP) setting Menu (page 43)</td>
</tr>
<tr>
<td>Set the access right of the user for the camera.</td>
<td>–</td>
<td>User setting Menu (page 41)</td>
</tr>
</tbody>
</table>
The Operating the Camera section explains how to monitor the image from the camera using the Web browser. Use Internet Explorer as the Web browser. The functions of the camera should be set by the Administrator. For setting the camera, see “Administrating the Camera” on page 25.

**Administrator and User**

This network camera classifies the people who log in as the Administrator and the User.

The Administrator can use all functions of this network camera including camera setting. The functions the User can use are monitoring the image and audio from the camera, and controlling the camera. The Viewers setting restricts the user’s access right, and the user is classified as the one of three types.

Each type of the user can use the following functions.

<table>
<thead>
<tr>
<th>Function</th>
<th>Administrator</th>
<th>User</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monitor a live image</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Watch date and time</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Control the frame rate (Usable only when JPEG mode is selected)</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Control the image view size</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Zoom a image by the digital zoom</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Save the still image in the computer</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Send an image file to the FTP server</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Send an image attached to a mail</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Record an image on the inside memory of the camera</td>
<td>○</td>
<td>●</td>
</tr>
<tr>
<td>Control the Alarm out of the I/O port on the camera main unit</td>
<td>○</td>
<td>●</td>
</tr>
</tbody>
</table>

- Usable function
- Not usable function

1) This function is usable with the Java applet viewer.
2) This function is not usable with the Java applet viewer.

The access rights of the administrator and the user can be set in “Setting the User — User setting Menu” on the Advanced mode menu for the administrator on page 41.
Logging in to Homepage — Welcome Page

Logging in as a User

1. Start the web browser on the computer and type the IP address of the camera you want to monitor.

   Address: http://192.168.0.100/

   The welcome page of the network camera is displayed in the Web browser.

2. Select the viewer.
   The usable viewers differ depending on the video mode (page 34) of the camera. When the video mode is set to MPEG4, you can only select ActiveX viewer, and may not select other viewers. (MPEG4 is default. See illustration on Step 1 above.) When the video mode is set to JPEG, you can select ActiveX viewer or Java applet viewer. For details, see “About Viewers” on page 18.

   Welcome page when the video mode is JPEG

3. Select the viewer language.
   Click English or Japanese at the bottom of the welcome page.

4. Click Enter.
   The main viewer appears.

   With the ActiveX viewer (MPEG4)

   Control the camera from the main viewer.

   Note
   If the Welcome page does not activate correctly, the security level of the Internet Explorer may be set to Medium or higher. See “To display the welcome page and the main viewer correctly” on page 14 and check the security level.

   Displaying the setting window for the administrator directly

   When the administrator sets the camera functions, the setting window can be displayed directly from the welcome page.

   1. Select the viewer language on the welcome page. Click English or Japanese at the bottom of the welcome page.
2 Click **Setting** on the welcome page. The following dialog appears.

![Setting dialog](image)

3 Enter the user name and password for Administrator, then click **OK**.

The user name “admin” and the password “admin” are set at the factory for the Administrator. You can change them in the User setting menu of the Advanced mode menu (see page 41).

The Advanced mode menu appears in another window.

![Advanced mode menu](image)

---

### About Viewers

You can use the following viewer according to the **Video mode** setting in the camera setting menu of the Advanced mode menu (page 34).

#### ActiveX viewer

This viewer can monitor the image in both MPEG4 and JPEG video modes.

You must install this viewer when you access to the main viewer at the first time.

**When you display the main viewer of the camera for the first time**

When you log in the network camera using ActiveX viewer for the first time (clicking **Enter** to enter the main viewer), the Security Warning appears. Click **Yes** and install ActiveX Control. You can use all the functions of the viewer by using ActiveX Control.

#### Java applet viewer

You can select this viewer when the camera video mode is set to JPEG. The frame rate is lower than the ActiveX viewer.

The Java applet viewer operates only when Java is installed and Java (Sun) is enabled. If it does not operate correctly, check whether the effective Java version has been installed successfully and Java (Sun) is enabled.

**Effective versions:** Java Plug-in Ver. 1.6.0_01

**To check the Java version**

Select **Tools** from the menu bar of Internet Explorer, then select **Internet Options** and click the **Advanced mode** tab. Check whether the version of Java displayed for **Java (Sun)** is one of the versions specified above. If **Java (Sun)** is not displayed, it means that Java is not installed. You need to install Java.

**To enable Java Plug-in**

Check “Use JRE 1.6.0_01 for <applet> (requires restart)” in “Java (Sun)”.

**To install Java Plug-in**

Download Java 2 Runtime Environment, Standard Edition (JRE) from the homepage of Sun Microsystems, Inc., and install it by following the instructions on the installer.

**Notes**

- If **Automatic configuration** is enabled in the Local Area Network (LAN) Settings of Internet Explorer, the camera image may not be displayed. In that case, disable **Automatic configuration** and set the Proxy server manually. For the setting of the Proxy server, consult your network administrator.
- When you install ActiveX Control, you should be logged in to the computer as the Administrator.

**Tip**

Every page of this software is optimized for display character size **Medium** for Internet Explorer.
Configuration of Main Viewer

This section explains the functions of the parts and controls of the main viewer. For a detailed explanation on each part or control, see the specified pages.

Main viewer

Main menu

Setting
Click to display the Easy mode menu for Administrator menu. (See “Basic Operations of Easy mode” on page 25.)
You can operate this function only when logging in as the administrator.

Home
Displays the Welcome page.

Player
Click to download the “SNC video player” application program built in the camera. The SNC video player allows you to play video/audio data recorded on the camera with your computer. (See “Using the SNC video player — Playing Video/Audio File Recorded on Camera” on page 71.)

Camera Control Section

Frame rate

(Displayed only when the camera Video mode (page 34) is set to JPEG.)
Selects the frame rate to transmit images.

View size

Selects the view size to be displayed. (page 21)

Digital zoom
Click to change the size of the digital zoom. (page 21)

Capture
Click to capture a still image shot by the camera and to store it in the computer. (See “Capturing a Monitor Image” on page 21.)

Trigger

(Displayed only when the camera Viewer mode (page 41) is set to Full and one or more triggers are enabled in the Trigger menu (page 54).)
Select the function you want to use from the drop-down list and click . The selected function is activated. The selectable functions are as follows:
– send the still image files attached to an e-mail (page 22)
– send the still image files to an FTP server (page 22)
– record the still image files in the built-in memory, (page 23)
– switch the alarm output on/off (page 23)
Transmission (Switching the TCP/UDP transmission mode)

(Displayed only when the camera Video mode (page 34) is set to MPEG4 and using the ActiveX viewer.)

Each click switches the transmission mode of the video/audio data among TCP mode, UDP (Unicast) mode and UDP (Multicast) mode. (page 24)
The last selected mode is saved in the computer, and will stay selected for the next starting.

Volume

(Displayed when the Microphone (page 35) is set to On.)
Drag the bar of icon to adjust the volume. When you click icon, the icon changes to and the audio output stops. To output the audio, click again.

Note
If the volume icon is not displayed due to the use of using Java applet viewer, Audio codec may not be set G.711(64kbps) (page 35) or Java may not be installed correctly.
To check if Java is installed correctly, refer to “Java applet viewer” of “About Viewers” on page 18.

Controlling the Monitor Image

You can monitor the camera image on the monitor window of the main viewer.

Monitoring the camera image

1. Log in to the home page to display the main viewer. You can see how to log in on page 17, “Logging in as a User”.

2. Select the frame rate (only when the camera Video mode is set to JPEG).

Click the Frame rate list box to select the frame rate for transmitting the image. Selectable frame rates are 1, 2, 3, 4, 5, 6, 8, 10, 15, 20, 25 and 30 fps.

“fps” is a unit indicating the number of frames transmitted per second.
If you select 30 fps, the image is sent at the maximum speed of the connected line (30 fps maximum).

Note
The frame rate options indicate the maximum number of frames that can be transmitted.
The number of frames actually transmitted may vary depending on network environments and camera settings (image size and image quality settings).

The image shot by the camera is shown here. Date and time is displayed at the top of the window.
Capturing a Monitor Image

You can capture a monitoring image as a still image and save it in the computer.

Capturing a monitor image

1. Monitor the camera image in the monitor window.
2. Click  Capture icon. The still image of the moment you click is captured, and the still image is displayed in the monitor window.

With the ActiveX viewer

3. To cancel the still image, click Cancel or Close.

Zooming in the monitor image

1. Click Digital zoom icon.
2. Click the point you want to zoom in. The image is expanded by about 1.5 times with the clicked point at the center.

The digital zoom icon changes to .

3. To cancel zooming in, click icon.

Select the view size.

Click View size list box to select the view size from among Auto, 640 × 480, 320 × 240 and 160 × 120. Auto is determined by the image size specified in the Camera setting page (page 34).
Saving the captured image

With the ActiveX viewer

1. Capture the monitor image.
2. Click Save. 
   Save As dialog appears.
3. Select JPEG Files or Windows Bitmap Files as Save as type.
4. Type the File name and specify Save in, then click Save.

With the Java applet viewer

1. Capture the monitor image.
2. Right-click the mouse to display the menu and select Save Picture As...
   Save Picture dialog appears.
3. Select JPEG or Bit map as Save as type.
4. Type in File name and specify Save in, then click Save.

Sending an Image File

You can send a captured still image with an attached mail or to the FTP server. 
To use this function, you need to make the e-Mail(SMTP) or FTP client active, and set the address properly in the Trigger setting menu on the Advanced mode menu (page 54).

Sending a Monitor Image via e-Mail

1. Monitor the image on the monitor window.
2. Select e-Mail from the Trigger list box.
3. Click . 
   The still image of the moment when you click is captured, and the mail attached with the image file is sent to the mail address you have set.

Sending a Monitor Image to an FTP Server

1. Monitor the image on the monitor window.
2. Select FTP from the Trigger list box.
3. Click . 
   The still image of the moment when you click is captured, and the image file is sent to the FTP server.
Recording a Still Image in the Built-in Memory of the Camera

You can capture a camera image as a still image and record it in the built-in memory of the camera. To use this function, you need to make Image memory active and to set details of the image memory in the trigger setting menu on the Advanced mode menu (page 54).

1. Monitor the image on the monitor window.
2. Select Image memory from the Trigger list box.
3. Click .

The still image of the moment when you click is captured, and the image file is recorded in the built-in memory of the camera.

Controlling Alarm output

You can control the Alarm output On (short-circuit) and Off (open). To use this function, you need to make Alarm output active in the Trigger setting menu on the Advanced mode menu (page 55).

1. Monitor the image on the monitor window.
2. Select Alarm output from the Trigger list box.
3. Click .

Each click switches the Alarm output between On (short-circuit) and Off (open) alternately.

Tip

For the connection of peripheral devices to the Alarm output of the I/O port, see the supplied Installation Manual.
Switching TCP/UDP Transmission Mode

You can select the communication port of the video/audio data as TCP or UDP. This function can be used when the Video mode (page 34) is set to MPEG4 and the ActiveX viewer is used.

**Notes**

- The function may not operate correctly when you use personal firewall software or antivirus software on your computer. In that case, disable the software or select the TCP mode.
- If you are using Windows XP Service Pack 2 or Windows Vista, disable "Windows Firewall." For details, see “Configuring Windows Firewall” in "When using Windows XP Service Pack 2" on page 10 or “Configuring Windows Firewall” in “When using Windows Vista” on page 12.

1 Display the main viewer.

2 Click TCP/UDP transmission selector icon. Transmission mode selector dialog appears.

3 Click one of the buttons TCP, UDP (Unicast) or UDP (Multicast).

**TCP:** This is normally selected.
When TCP is selected as the communication port, HTTP communication is adopted for video/audio communication. HTTP is the protocol used for reading a usual Web page. In an environment capable of reading Web page, you can watch or listen to the video/audio by selecting TCP port.

**UDP (Unicast):** When UDP (Unicast) is selected as the communication port, RTP (Real-time Transport Protocol) is adopted for video/audio communication. As RTP is the protocol for running video/audio data, video/audio can be played smoother than when TCP (HTTP) is selected. If the fire-wall is installed between the camera and the computer, or depending on the network environment, the video/audio may not play properly when UDP (Unicast) is selected. In this case, select TCP.

**UDP (Multicast):** This is selectable when the multicast streaming (page 34) is On. When UDP (Multicast) is selected as the transmission port, RTP (Real-time Transport Protocol) and UDP multicast techniques are adopted for video/audio transmission. By selecting it, the network transmission load of the camera can be reduced. If a router which does not correspond to the multicast or the fire-wall is installed between the camera and the computer, the video/audio may not play properly. In this case, select TCP or UDP (Unicast).

4 Click OK to close the dialog.
If you decide not change the transmission setting, click Cancel.
The Administrating the Camera section explains how to set the functions of the camera by the Administrator. For monitoring the camera image, see “Operating the Camera” on page 16.

Administrator setting menu includes the Easy mode (basic setting) and the Advanced mode (detail settings depending on the user’s condition). This section explains the basic operations of the Easy mode and explains each option of the Easy mode, then similarly for the Advanced mode.

### Basic Operations of Easy mode

The Easy mode is used for basic settings for the network camera.

1. Click  Setting icon of the main viewer to display Easy mode.

2. Select the viewer language on the welcome page. Click English or Japanese at the bottom of the welcome page.

3. Click . The authentication dialog appears. Enter the username and password for Administrator. The username “admin” and password “admin” are set at the factory for the Administrator.

4. Click the radio button of the option you want to set from among those in the Easy mode menu, or click the setting item button to display the sub menu, and decide details.

In the Easy mode menu, the new setting will become active only by being selected.

For details on each setting option, see “Setting Options of Easy mode” on page 26.

5. After setting, click . The display returns to the main viewer.

**Note**

If you set “White balance”, “Image quality” and “Image size” in Advanced mode to values not shown in Easy mode, the radio button may be in the statement that nothing is selected. In this case, you can select it by clicking the radio button.

---

**Easy mode**

- White balance: Auto, Indoor, Outdoor
- Mode: Day/Night, Day
- Bright: Off, Auto, Bright, Dim
- Image size: 1280 x 720, 640 x 480
- Image quality: Good, Normal, Poor
- Mirror: Off, On
- Data & time setting: UTC, Local
- Set Daylight Savings Time: Off
Setting Options of Easy mode

Displays the Advanced mode menu (page 28).

White balance
Select the white balance mode. Auto, Indoor or Outdoor can be selected.

Mount
The image can be displayed upside down. Select Desk top when you use the network camera on desktop, and select Ceiling when you use it fixed to the ceiling. You can always watch the proper image regardless of its position.

Blue LED
You can select the brightness of the blue LED on the top of the network camera. Bright, Dark or Off can be selected.

Brightness
You can adjust the brightness of the image sent from the network camera in eleven levels. Click the button of the brightness you want to select. The button on the left side is the darkest (Dark), and the button on the right is the brightest (Bright).

Image quality
You can select the quality of the image sent from the network camera. Usually select Normal. To give priority to the transmission speed and to watch a smooth image, select Low. To give priority to the image quality, select High.

Image size
You can select the image size sent from the network camera. 640 × 480 (VGA), 320 × 240 (QVGA) or 160 × 120 (QQVGA) can be selected.

Microphone
Select whether you send the audio from the built-in microphone or from the microphone input connector. Select On to send the audio from this network camera microphone.

Date & time setting
When you click Setting, date and time of the camera is set to suit those of the computer.

Note
When you change the Microphone setting, click Refresh of the Web browser to reflect the change in the opening main viewer page.

e-Mail (SMTP)
This is the setting for sending an e-mail with an attached image file of the monitor. Click e-Mail (SMTP) and the “Easy mode (e-Mail)” setting mode menu appears. (page 27)
Easy mode (e-Mail)

This is displayed when you click e-Mail (SMTP) of the Easy mode menu.

Note

While the camera video mode is set to MPEG4, the image of the composite video signal output from the video output connector of the camera may be distorted during mail transmission.

e-Mail (SMTP)

Select On when you use e-Mail (SMTP) function. When you select On, setting options are displayed. If you do not use it, select Off and click OK below.

SMTP server name

Type the SMTP (sending mail) server name up to 64 characters, or type the IP address of the SMTP server.

Authentication

Select the authentication required when you send an e-Mail.

None: Select when no authentication is necessary when an e-mail is sent.

SMTP Authentication: Select when authentication is necessary when an e-mail is sent.

POP before SMTP: Select when POP before SMTP authentication is necessary when an e-mail is sent.

POP server name

Type the POP (receiving mail) server name up to 64 characters, or type the IP address of the POP server. This setting is necessary when the SMTP server which sends e-mails performs authentication using the POP user account.

User name, Password

Type the user name and password of the user who has the mail account. This setting is necessary when the SMTP server which sends e-Mails performs authentication.

Recipient e-Mail address

Type the address to which you send e-Mails to up to 64 characters. If you want to send to two or more addresses, set them in the e-Mail (SMTP) setting menu (page 43) of the Advanced mode menu.

Administrator e-Mail address

Type the e-Mail address of the administrator of the camera up 64 characters. This will be the address for return mail and system mail from the mail server.

Subject

Type the subject up to 64 characters.

Message

Type the text up to 384 characters (Return corresponds to two characters).

Mode

Set the e-Mail sending mode.

Motion detection: When the camera detects any action, it sends the image file. If you select Motion detection, the camera detects activity in the shooting image due to the built-in motion detection function. Then the camera sends the e-Mail with the attached image file.

Set the details of the motion detection of the camera in the Motion detection setting menu (page 57) of the Advanced mode menu.

Note

The picture attached to the e-Mail is of the moment the motion detection function of the camera works. If the next activity is detected during processing of the image of the first detection, the process will be rejected. The motion detection function may not work properly in the following cases.

• During camera setting operation in the Camera setting menu.
• When the object is dark.
• When the camera is shaken because the installation location is unstable.
Periodical sending: The image file is sent regularly. After checking it, select Every 1 hour or Every 6 hours.
Every 1 hour: The camera sends the e-Mail with attached image file every 1 hour.
Every 6 hours: The camera sends the e-Mail with attached image file every 6 hours.

OK
Click this after setting.
When you click it, the dialog "Send a test mail?" appears. When you send a test mail to the address you have set, select OK. If you do not wish to send it, select Cancel.

Cancel
Click to return to the previous condition by canceling the setting.

---

Basic Operations of Advanced mode Menu

You can set all functions to suit the user's condition in the Advanced mode menu.
Click Setting in the welcome page or button in the Easy mode menu to display the Advanced mode menu.

Note on the display of menu options
In the setting menus of this unit, the options that you cannot currently select will be grayed out. The options that you can currently select will be displayed automatically as you change the setting.

How to set Advanced mode

1 Log in the home page to display the welcome page. You can see how to log in on page 14 “Logging in as a User”.

2 Select the viewer language on the welcome page. Click English or Japanese at the bottom of the welcome page.

3 Click Setting in the welcome page. The authentication dialog appears. Enter the user name and password for Administrator. The user name “admin” and password “admin” are set at the factory for the Administrator.

Advanced mode menu appears.

The following steps also display the Advanced mode menu.
① Click Enter in the welcome page to display the main viewer.
② Click in the main viewer.
③ Enter the user name and password for Administrator.
Easy mode appears.
4 Click \[\text{Advanced mode}\].

Click the menu name (example: System) on the left side of the Advanced mode menu.
The clicked setting menu appears.
Example: System setting menu

5 Select the tab above the setting menu, and set each setting option in the tab.
Example: “System” setting menu “Date & time” tab

See page 29 to 58 for details of setting menu tabs and setting options.

6 After setting, click \[\text{OK}\].
The setting contents become active.
Click \[\text{Cancel}\] to invalidate the set values and return to the previous settings.

**Buttons common to every setting menu**
The following buttons are displayed on the setting menus where they are necessary. The functions of the buttons are the same on every setting page.

Click \[\text{OK}\] to validate the settings.

---

**General notes on setting menus**

- After changing a setting on a setting menu, wait at least 10 seconds before turning off immediately the power of the camera.
  If the power is turned off immediately, the changed setting may not be stored correctly.
- When the camera settings are changed while watching the main viewer, some settings cannot be restored. To reflect the change on the opening main viewer, click \[\text{Refresh}\] of the Web browser.

**Configuration of Advanced mode Menu**

Displays the Easy mode menu (page 25).

**System**
Displays the System setting menu.
(“Configuring the System — System setting menu” on page 31).

**Camera**
Displays Camera setting menu for setting the camera image and audio.
(“Setting the Camera Image and Audio — Camera setting Menu” on page 34)

**Network**
Displays the network setting menu for setting the network connection.
(“Configuring the Network — Network setting Menu” on page 38)
User
Displays the user setting menu for setting the user name and the password to log in. (“Setting the User — User setting Menu” on page 41)

Security
Displays the security setting menu for specifying the computer allowed to connect to the camera. (“Setting the Security — Security setting Menu” on page 42)

e-Mail (SMTP)
Displays the e-Mail (SMTP) setting menu for sending an e-mail. (“Sending an Image via mail — e-Mail (SMTP) setting Menu” on page 43)

FTP client
Displays the FTP client setting menu for sending an image file to FTP server. (“Sending Images to FTP Server — FTP client setting Menu” on page 46)

Image memory
Displays the image memory setting menu for recording a video/audio file in the built-in memory of the camera. (“Recording Images in Memory — Image memory setting Menu” on page 49)

FTP server
Displays the FTP Server menu for setting the FTP server function of the camera. (“Downloading Images from the Camera — FTP server setting Menu” on page 52)

Alarm output
Displays the alarm out setting menu for the alarm out terminal of the camera. (“Downloading Images from the Camera — FTP server setting Menu” on page 52)

Trigger
Displays the trigger setting menu for the operations when you click the trigger button in the main viewer. (“Setting the Operations from the Viewer Page — Trigger setting Menu” on page 54)

Schedule
Displays the schedule setting menu for FTP client function, e-Mail (SMTP) function, Image memory function and Alarm out function and so on. (“Setting the Schedule — Schedule setting Menu” on page 55)

Alarm buffer
Displays the alarm buffer setting menu for the buffer which records the image and audio on the alarm detection. (“Setting the Alarm Buffer — Alarm buffer setting Menu” on page 56)

Motion detection
Displays the Motion detection setting menu for the motion detection function built into the camera. (“Setting the Motion Detection Function — Motion detection setting Menu” on page 57)

DDNS
Displays the * DDNS setting menu for registration and change in DDNS service. (“Using DDNS Service — DDNS Setting Menu” on page 59)

* DDNS: Dynamic Domain Name Service
Configuring the System — System setting menu

When you click System on the Advanced mode menu, the System setting menu appears. Use this menu to perform the principal settings of the software. The System setting menu is composed of five tabs which are System, Date & time, Initialization, System Log and Access Log.

System Tab

Title bar name
Type a name to display on the title bar up to 32 characters. The characters typed here are displayed on the title bar of the Web browser.

Welcome text
Type a text to show on the welcome page, with up to 1024 characters in HTML format. Use the <BR> tag for a line break. (A line break is equivalent to 2 characters.)

Serial number
Displays the serial number of the camera.

Software version
The software version of this camera is displayed.

Blue LED
You can select the brightness of the blue LED on the top of the network camera. Bright, Dark or Off can be selected.

Default URL
Select the homepage to be displayed when you enter the IP address of the camera in the web address box of the browser.

To display the homepage built in the camera
Select /index.html.

To display your individual homepage
You can display your favorite homepage. Store the HTML file in the built-in flash memory using the Custom Homepage Installer included in the supplied CD-ROM. For use of the Custom Homepage Installer, see page 72.

1. Select User Setting/user/.
2. Type the path of the HTML file in the text box up to 64 characters.

Tip
Even when you select User Setting/user/, the homepage inside the camera can be displayed by typing the following URL in the address box of the Web browser.

Example: When the IP address of the camera is set to 192.168.0.100

OK/Cancel
See “Buttons common to every setting menu” on page 29.

Date & time Tab

Current date & time
Displays the date and time set on the camera.

Note
After you have purchased the camera, be sure to check the date and time of the camera and set them if necessary.

PC clock
Displays the date and time set on your computer.
Date & time format
Select the format of date and time to be displayed on the main viewer from the drop-down list. You can select from among yyyy-mm-dd hh:mm:ss (year-month-day hour:minute:second), mm-dd-yyyy hh:mm:ss (month-day-year hour:minute:second), and dd-mm-yyyy hh:mm:ss (day-month-year hour:minute:second).

Adjust
Select to set the day and time.

**Keep current setting:** Select if you do not need to set the date and time.

**Synchronize with PC:** Select if synchronizing the camera's date and time with those of the computer.

**Manual setting:** Select if you want to set the camera's date and time manually.
Select the lower 2-digits of year, month, date, hour, minutes and seconds from each drop-down list.

**Synchronize with NTP:** Select if synchronizing the camera's date and time with those of the time server called NTP server (Network Time Protocol). Set the NTP server name and the Interval.

**NTP server name**
Type the host name or IP address of the NTP server, up to 64 characters.

**Interval**
Select the interval at which you want to adjust the camera's time referring to the NTP server's time, between 1 and 24 hours. The set interval is a guide, and does not indicate the exact time.

**Note**
The setting time may not accord with the exact time according to the network environment.

**Time zone**
Set the time difference from Greenwich Mean Time in the area where the camera is installed. Select the time zone where the camera is installed from the drop-down list.

**Automatically adjust clock for daylight saving time changes**
When you select it, the clock is automatically adjusted according to the daylight saving time of the selected time zone.

**Note**
If the time zone selected on the Time zone menu is different from that set on the computer, the time is adjusted using the time zone difference and set on the camera.

OK/Cancel
See “Buttons common to every setting menu” on page 29.

Initialize Tab

**Reboot**
Reboots the camera. Click Reboot, and the message “The SNC-P1 will be rebooted. Are you sure?” appears. Click OK to reboot the camera. It takes about two minutes to start again.

**Factory default**
Resets the camera to the factory settings. Click Factory default, and the message “Set up data will be initialized. Are you sure?” appears. When you click OK, the network indicator and the Blue LED on the camera start to blink. After adjustments of the default settings have finished, the camera reboots automatically. Do not turn off the camera until the camera reboots.

**Tip**
The camera can also be reset to the factory settings by turning the power on of this unit while pressing the reset switch on the camera. For details, see the supplied Installation Manual.

**Backup setting data**
Saves the setting data of the camera in a file. Click Save, and follow the instructions on the Web browser to specify the folder and save the setting data of the camera. The file name preset at the factory is “snc-p1.cfg.”

**Restore setting**
Loads the stored setting data of the camera. Click Browse and select the file in which the setting data is stored. Then, click OK, and the camera is adjusted according to the loaded data and restarted.
Notes

- With Restore setting, some items in the Network setting menu (page 38) cannot be restored.
- The following item cannot be stored or restored with Backup setting data or Restore setting:
  - a homepage created using Custom Homepage Installer

Delete user setting URL

By pressing Delete, you can delete the home page recorded on the flash memory of the camera with Custom Homepage Installer (page 72).

Firmware upgrade

Use this when upgrading the camera software. Click Browse and specify the file for upgrading, then click OK. The message “Upgrade firmware? Are you sure?” is displayed. Click OK and upgrading starts. After completion, the camera starts again.

Notes

- Use only the upgrade file special to this camera. If not, a problem may occur.
- Do not turn off the camera until the upgrading is completed.

System log Tab

The data of the software activity of the camera are recorded in this log. It includes data that are useful when a problem occurs.

Click Reload to reload the latest data.

Access log tab

Access log

The access record of the camera is displayed. Click Reload to reload to the latest data.
Setting the Camera Image and Audio — Camera setting Menu

When you click Camera on the Advanced mode menu, the Camera setting menu appears. Use this menu to set the functions of the camera. The Camera setting menu consists of 5 tabs: Common, Picture, MPEG4, JPEG and Reset.

**Common Tab**

![Diagram of Advanced mode menu]

**Video mode**
Select the output format of the camera image. MPEG4 or JPEG can be selected.

**Unicast streaming**
Specify the transmission port number of the video data and audio data used when UDP (Unicast) is selected with the TCP/UDP transmission switching icon in the main viewer.

- **Video port number**: Specify the transmission port number of the video data. It is initially set to 50000. Specify an even number from 1024 to 65534.
- **Audio port number**: Specify the transmission port number of the audio data. It is initially set to 50002. Specify an even number from 1024 to 65534.

**Multicast streaming**
Set whether the camera uses the Multicast streaming or not. It reduces sending load on the camera by making the computer of the same segment network (not above the router) receive the same transmitting data.

- **On** to allow the multicast sending and **Off** not to allow.

When select **On**, set **Multicast address**, **Multicast video port number** and **Multicast audio port number** properly.

- **Multicast address**: Type the multicast address used on the Multicast streaming.
- **Multicast video port number**: Specify the video transmission port number used for the Multicast streaming.
- **Multicast audio port number**: Specify the audio transmission port number used for the Multicast streaming.

**Image size**
You can select the image size sent from the network camera. 640 × 480 (VGA), 480 × 360, 384 × 288, 320 × 240 (QVGA), 256 × 192 or 160 × 120 (QQVGA) can be selected.

**Cropping**
When the image size is set to 640 × 480 (VGA), you can crop a portion of the image and display the cropped image on the computer. With the cropping, the transmitting data size, and thus, the network load is reduced and a higher frame rate is obtained.

- **On** to crop the image, or **Off**.
- **While Cropping is set to On**, Motion detection function does not work.
- **While Cropping is set to On**, the image of the composite video signal output from the video output connector of the camera may be distorted.

**To crop an image**

1. Set the **Image size** to 640 × 480(VGA). The **Cropping** is displayed.
2. Set the **Cropping** to **On** and click the **Area setting** button. The “Area setting” display appears.
3. Specify the cropping area.
Click the left button of the mouse on the still image and drag it diagonally. The red frame that appears as you drag indicates the cropping area.

4 Click **OK** at the bottom of the window. The cropped image is displayed on the main viewer.

5 To close the image, click in the upper-right corner.

**Color**
Select **Color** or **Monochrome** for the image.

**Image flip**
The image can be displayed upside down. Select **On** when you fix the camera to the ceiling.

**Microphone**
Select whether you send the audio from the built-in microphone or from the microphone input connector. Select **On** to send the audio from this network camera.

**Note**
When you change the Microphone setting, click **Refresh** on the Web browser to reflect the change when opening main viewer page.

**Mic volume**
Set the volume level of the audio input from the built-in microphone or the microphone input connectors. It is adjustable from –10 to +10.

**Audio codec**
Select the bit rate when you send the audio from the built-in microphone or from the microphone input connectors. **G.711 (64kbps)**, **G.726 (40kbps)**, **G.726 (32kbps)**, **G.726 (24kbps)** or **G.726 (16kbps)** can be selected.

**Note**
When the bit rate is set to other than G.711(64bps), the audio is not output in case of using Java applet viewer.

**Speaker output**
Set whether you output the audio sent from the computer connected with the audio input connector to the speaker (active speaker for example) of the camera connected via line output connectors using SNC audio upload tool included in the supplied CD-ROM.
Select **On** to accept the audio data transmission from SNC audio upload tool.

**OK/Cancel**
See “Buttons common to every setting menu” on page 29.

**Picture Tab**
You can set the color condition, exposure, etc. of the camera.

**White balance**
Select the white balance mode from among **Auto**, **Indoor**, **Outdoor**, **One push WB**, and **Manual**.

- **Auto**: to automatically adjust the white balance
- **Indoor**: to adjust the white balance for shooting indoors under an incandescent lamp (about 3200 K)
- **Outdoor**: to adjust the white balance for shooting outdoors (about 5800 K)
- **One push WB**: The **One push trigger** button is displayed. Click the button to adjust the white balance instantly.
- **Manual**: When you select this, **R gain** and **B gain** are displayed and you can set them.
Selectable gain values are from 0 to 255.
Exposure mode
Select the exposure mode of the camera from among Full auto, Shutter priority, and Manual. The setting items required for each setting appear.

Full auto: The camera executes the gain adjustment and the shutter speed adjustment automatically. When you select this, Flickerless mode, Slow shutter and Backlight compensation are displayed and you can set them as you require.

Shutter priority: The camera executes the gain adjustment automatically and you can select the shutter speed. When you select it, Backlight compensation and Shutter speed are displayed and you can set them.

Manual: You can set the exposure manually. When you select it, Shutter speed and Gain are displayed and you can set them.

According to the Exposure mode, the following setting options are displayed.

Flickerless mode
If the image is flickering by the fluorescent light, select On to reduce it.

Note
This mode is available only for CE model.

Slow shutter
Set the Slow shutter. When On is selected, auto exposure setting including the long time exposure is set to suit to the brightness of the scene.

Backlight compensation
You can set On or Off of the exposure compensation. When you select On, the exposure compensation function starts to work.

Shutter speed
Select the shutter speed of the camera from the list box. Selectable values of the shutter speed are 1/10000, 1/4000, 1/2000, 1/1000, 1/500, 1/250, 1/100, 1/50, 1/30, 1/15, 1/8, 1/4, 1/2 and 1/1 second.

Gain
Select the gain from the list box. Selectable values of the gain are 0, 6, 12 and 18 dB.

Brightness
Tweaks the exposure set in the exposure mode. It is brighter when a large value is selected, and it is darker when a small value is selected. The value among –5 to 5 can be set.

Saturation
Select the saturation in 7 steps, from –3 to 3. Selecting 3 gives the image with the highest saturation.

Sharpness
Select the sharpness in 7 steps, from –3 to 3. Selecting 3 gives the image with the highest sharpness.

Contrast
Select the contrast in 7 steps, from –3 to 3. Selecting 3 gives the image with the highest contrast.

OK/Cancel
See “Buttons common to every setting menu” on page 29.

User preset
You can save the present settings in the camera as the custom, or you can load the settings saved in the camera.

Save: Click to save the present settings of the Picture tab.
Load: Click to load the saved settings. To use them, click OK.

MPEG4 Tab

Frame rate
Set the frame rate of the MPEG image. Selectable values are 1, 2, 3, 4, 5, 6, 8, 10, 15, 20, 25 and 30 fps.

“fps” is a unit indicating the number of frames transmitted per second.

Bit rate
Set the bit rate of MPEG image transmission for a line. Selectable values are 64, 128, 256, 384, 512, 768, 1024, 1536 and 2048 kbps.
Note
The selected frame rate and bit rate are a tentative value. The actual frame rate and bit rate may be different according to the image size, the shooting scene or the network condition.

I-picture interval
Set the I-picture inserting interval of MPEG4. I-picture is the compression data serving the basic point when the data compressed by MPEG4 is depressed. In the condition that errors tends to occur, such as the network environment variation, the distortion of the image is reduced by selecting a small value. The selectable values are 1, 2, 3, 4 and 5 seconds.

Auto rate control
This function adjusts the frame rate and the bit rate automatically so that the camera plays a smooth image to suit the connected computer environment. If On is selected, the rate of MPEG4 image is automatically adjusted.

Note
The maximum transmission rate will be the values set in Frame rate and Bit rate.

OK/Cancel
See “Buttons common to every setting menu” on page 29.

JPEG Tab

Frame rate
Set the maximum frame rate of JPEG image that can be monitored on the computer. Selectable frame rates are 5, 6, 8, 10, 15, 20, 25 and 30 fps.

“fps” is a unit indicating the number of frames transmitted per second.

Image quality
Set the quality of JPEG image. Selectable values are from Level 1 to Level 5. Selecting Level 5 gives the image with the highest quality.

Bandwidth control
When the video mode is set to JPEG, the network bandwidth can be limited. Selectable bandwidths are 0.5, 0.6, 0.7, 0.8, 0.9, 1.0, 2.0, 3.0, 4.0, and Unlimited Mbps. When you do not wish to limit the bandwidth, select Unlimited.

OK/Cancel
See “Buttons common to every setting menu” on page 29.

Reset Tab

Reset camera menu
Click Reset, and the message “Camera menu setting is reset to default. Are you sure?” is displayed. To reset to default, click OK.
Configuring the Network — Network setting Menu

When you click Network on the Advanced mode menu, the Network setting menu appears. Use this menu to configure the network to connect the camera and the computer. The Network setting menu consists of 3 tabs: Network, PPPoE and Dynamic IP address notification.

Network Tab

This section provides the menus for connecting the camera through the network cable.

**Advanced mode**

<table>

**MAC address**

Displays the MAC address of the camera.

**Obtain an IP address automatically (DHCP)**

DHCP server is installed on the network. Select it when the IP address is assigned by DHCP server. IP address is assigned automatically.

**Note**

When you set Obtain an IP address automatically (DHCP), make sure that DHCP server is working on the internet.

**Use the following IP address**

Select this when a fixed IP address is set.

**IP address**

Type the IP address of the camera.

Subnet mask

Type the subnet mask.

Default gateway

Type the default gateway.

**Obtain DNS server address automatically**

Select this to obtain the address of DNS server automatically. It can be set only when Obtain an IP address automatically (DHCP) is selected.

**Note**

When you select “Obtain DNS server address automatically”, make sure that DHCP server is active on the network.

**Use the following DNS server address**

Select this when you set the fixed address as the IP address of DNS server.

**Primary DNS server**

Type the IP address of the primary DNS server.

**Secondary DNS server**

Type the IP address of the secondary DNS server, if necessary.

**Host name**

Type the host name of the camera to be transmitted to the DHCP server. This setting is valid only when Obtain an IP address automatically (DHCP) is selected in the Network tab.

**Domain suffix**

Type the domain suffix of the camera to be transmitted to the DHCP server. This setting is valid only when Obtain an IP address automatically (DHCP) is selected in the Network tab.

**Note**

The domain suffix is sent to the DHCP server as FQDN (Fully Qualified Domain Suffix) information when Host name is set.

**HTTP port number**

Normally select 80. If you want to use a port number other than 80, select the text box and type a port number between 1024 and 65535.

**Note**

When you have set the HTTP port number to a number other than 80 in the Network setting menu or in the IP
Setup Program, access the camera again by typing the IP address of the camera on your Web browser as follows:

Example: when HTTP port number is set to 8000

![http://192.168.0.100:8000/]

**OK/Cancel**

See “Buttons common to every setting menu” on page 29.

**PPPoE Tab - Setting of PPPoE Connection**

Use it when you connect the camera with PPPoE (Point-to-Point Protocol over Ethernet). PPPoE connection is the protocol that is widely used in xDSL (digital affiliate line such as ADSL, VDSL or SDSL) as the authentication and connection system.

**PPPoE**

Set whether you connect the camera using PPPoE function or not. When **On** is selected, PPPoE connection is used.

**IP address**

When you connect to the network by PPPoE function, IP address obtained at PPPoE connection is displayed.

**User ID**

Type the user ID for the authentication necessary for PPPoE connection. Type up to 64 characters.

**Password**

Type the password for the authentication necessary for PPPoE connection. Type confirm from 1 to 32 characters.

**Re-type password**

To confirm the password, re-type the password typed in the password box.

**Obtain DNS server address automatically**

Select to obtain the address of DNS server automatically.

**Use the following DNS server address**

Select to set the fixed address as the IP address of DNS server.

**Primary DNS server**

Type the IP address of the primary DNS server.

**Secondary DNS server**

Type the IP address of the secondary DNS server, if necessary.

**OK/Cancel**

See “Buttons common to every setting menu” on page 29.

**Dynamic IP address notification Tab — Notifying the IP Address**

When the DHCP setting is set to **On** or PPPoE setting is set to **On** on the Network tab, you can send notification of the completion of the network settings using the SMTP or HTTP protocol.
e-Mail (SMTP) notification
Select On to send an e-Mail when the DHCP setting is completed.

SMTP server name
Type the name or IP address of the SMTP server to use for sending an e-Mail, up to 64 characters.

Authentication
Select the authentication required when you send an e-Mail.

None: Select if no authentication is required when an e-Mail is sent.
SMTP authentication: Select if authentication is required if an e-Mail is sent.

POPO before SMTP: Select if POP before SMTP is required when an e-Mail is sent.

POP server name
It is necessary when the POP before SMTP is selected in Authentication.
Type the POP (receiving mail) server name up to 64 characters. Or type the IP address of the POP server. This setting is necessary when the SMTP server which sends e-Mails performs authentication using the POP user account.

User name, Password
Type the user name and Password of the user who has the mail account. This setting is necessary when the SMTP server which sends e-Mails performs authentication.

Recipient e-Mail address
Type the recipient e-Mail address up to 64 characters. You can specify only one recipient e-Mail address.

Administrator e-Mail address
Type the e-Mail address of the camera administrator, up to 64 characters. This is used as the reply address or the address for a system mail from the mail server.

Subject
Type the subject/title of the e-Mail up to 64 characters.

Message
Type the text of the e-Mail up to 384 characters. (A line break is equivalent to 2 characters.) You can describe the information of the acquired IP address, etc. using the special tags mentioned below.

HTTP notification
Select On to output a command to the HTTP server when the DHCP setting is completed. Using this function, you can configure a useful system, for example, to view the access log stored in the HTTP server or start an external CGI program.

URL
Specify the URL to send HTTP request, using up to 256 characters. The URL is normally written as follows:

http://ip_address[:port]/path?parameter

ip_address: Type the IP address or host name of the host to which you want to connect.
[port]: Specify the port number to which you want to connect. If you want to use the well-known port number 80, you do not need to input this value.
path: Type the command.
parameter: Type the command parameter if necessary. You can use the special tags mentioned below for the parameters.

Proxy server name
When you send HTTP request via a proxy server, type the name or IP address of the proxy server, using up to 64 characters.

Proxy port number
Specify the port number when you send HTTP request via the proxy server. Set a port number between 1024 and 65535.

Method
Select the HTTP method GET or POST.

OK/Cancel
See “Buttons common to every setting menu” on page 29.

About the special tags
You can use the following five special tags to allow the notification of the settings acquired by the DHCP, such as an IP address. Type the tags in the parameter section of the URL that you described in the Message field of the HTTP.

<IP>
Use this tag to embed the IP address acquired by the DHCP in the text or parameter.

<HTTPPORT>
Use this tag to embed the specified HTTP server port number in the text or parameters.
Setting the User — User setting Menu

When you click User on the Advanced mode menu, the User setting menu appears. Use this menu to set the user names and passwords of Administrator and up to 9 kinds of users (User 1 to User 9), and the access right of each user.

Administrator, User 1 to 9
Specify User name, Password, Re-type password, FTP user and Viewer mode for each user ID.

User name
Type a user name between 5 and 16 characters.

Password
Type a password between 5 and 16 characters.

Re-type password
To confirm the password, retype the password typed in the Password box.

FTP user
Set whether allowed to log in to FTP server or not. Check the box if allowed to log in to FTP server.

Viewer mode
If the user is authenticated when the main viewer is displayed, you can select the viewer mode displayed after authentication.

Full: You can operate all functions in this mode.
Light: You can operate the functions other than the trigger button on the main viewer, TCP/UDP switching button on the main viewer, and the frame rate setting.
View: You can only monitor the camera image.
**Viewer authentication**

Set whether the user is authenticated or not when the main viewer is displayed. When you select **On**, the main viewer is displayed to suit the authenticated user. When you select **Off**, select the view mode of the main viewer page which is displayed without authentication from **Full**, **Light** or **View**.

**OK/Cancel**

See “Buttons common to every setting menu” on page 29.

---

**Setting the Security — Security setting Menu**

When you click **Security** on the Advanced mode menu, the Security setting menu appears. Use this menu to limit the computers that can access the camera.

**Security function**

To activate the security function, select **On**. If you do not wish to use the security function, select **Off**.

**Default policy**

Select the basic policy of the limit from **Allow** and **Deny** for the computers specified on the Network address/Subnet 1 to Network address/Subnet 10 menus below.

**Network address/Subnet 1 to Network address/Subnet 10**

Type the IP addresses and subnet mask values you want to allow or deny access to the camera. You can specify up to 10 IP addresses and subnet mask values. For a subnet mask, type 8 to 32. Select **Allow** or **Deny** from the drop-down list on the right for each IP address/subnet mask.

**Tip**

The subnet mask value represents the bit number from the left of the network address. For example, the subnet mask value for “255.255.255.0” is 24. If you set “192.168.0.0/24” and “Allow,” you can allow access from the computers having an IP address between “192.168.0.0” and “192.168.0.255”.
Note
You can access the camera even from a computer having an IP address whose access right is set to **Deny**, if you enter the user name and password set for the Administrator boxes in the User setting menu.

**OK/Cancel**
See “Buttons common to every setting menu” on page 29.

---

**Sending an Image via mail — e-Mail (SMTP) setting Menu**

When you click **SMTP** on the Advanced mode menu, the SMTP setting menu appears. By using e-Mail (SMTP) function, you can send a mail with attached image file which has been shot linked with the external sensor input or with the built-in motion detection function. The image file can also be sent periodically.

The e-Mail (SMTP) setting menu is composed of three tabs: **Common**, **Alarm sending** and **Periodical sending**.

**Common Tab — Setting the e-Mail (SMTP) Function**

**e-Mail (SMTP)**
Select **On** when you use the e-Mail (SMTP) function. The common setting options are displayed below. If you do not wish to use the e-Mail (SMTP) function, select **Off** and click **OK**.

**Notes**
- During transmission of an image file via mail, the frame rate and operation performance of the monitor image of the main viewer decline.
- While the camera video mode is set to **MPEG4**, the image of the composite video signal output from the video output connector of the camera may be distorted during mail transmission.
- You cannot send an audio file by using the mail sending function.
**SMTP server name**
Type the SMTP server name up to 64 characters, or the IP address of the SMTP server.

**Authentication**
Select the authentication required when you send an e-Mail.
- **None:** Select if no authentication is required when an e-Mail is sent.
- **SMTP authentication:** Select if authentication is required when an e-Mail is sent.
- **POP before SMTP:** Select if POP before SMTP authentication is required when an e-Mail is sent.

**POP server name**
It is necessary when the **POP before SMTP** is selected in **Authentication**.
Type the POP (receiving mail) server name up to 64 characters, or type the IP address of the POP server. This setting is necessary when the SMTP server which sends e-mails performs authentication using the POP user account.

**User name, Password**
Type the user name and Password of the user who has the mail account. This setting is necessary when the SMTP server which sends e-mails performs authentication.

**Recipient e-Mail address**
Type the recipient e-Mail address up to 64 characters. You can specify up to three recipient e-Mail addresses.

**Administrator e-Mail address**
Type the Administrator e-Mail address up to 64 characters.
This address is used for reply mail and sending system messages from the SMTP server.

**Subject**
Type the subject/title of the e-Mail up to 64 characters. When **Alarm sending** of the alarm tab is set to **On**, the mail sent due to the alarm detection will indicate the type of alarm in the subject. [SI] is added for sensor input detection, and [MD] is added for motion detection.

**Message**
Type the text of the e-Mail up to 384 characters. (A line break is equivalent to 2 characters.)

**OK/Cancel**
See “Buttons common to every setting menu” on page 29.

---

**Alarm sending Tab — Setting the mail sending mode when detecting the alarm**
Set to send the mail with connection to the alarm detection by the external sensor input or by the built-in motion detection function.

**Alarm sending**
Select **On** to set to send mail with connection to the alarm detection.

**File attachment**
Set whether an image file is to be attached to the mail or not.
When **On** is selected, the image file made by the settings below is attached. When **Off** is selected, only the message is sent.

**Image file name**
Type the file name you want to assign to the image to attach a mail. You can use up to 10 alphanumeric, - (hyphen) and _ (underscore) for naming.

**Suffix**
Select a suffix to add to the file name.
- **None:** No suffix is added. The Image file name is assigned to the image to be sent via an e-Mail.
- **Date & time:** The & time suffix is added to the Image file name. The date/time suffix consists of lower two-digits of year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits), and consecutive number (2 digits), thus 14-digit number is added to the file name.
- **Sequence number:** A consecutive number of 10 digits between 0000000001 and 4294967295 and two fixed digits 00 is added to the Image file name.
Tip
A consecutive number added to Date & time and Sequence number is used to identify each of multiple files created with one alarm event.

Sequence number clear
Click Clear to reset the Sequence number suffix to 1.

Alarm
Select the connected alarm.
Sensor input: The external sensor which is connected to the sensor input of the camera I/O port.
Motion detection: Click Motion detection button, and the Motion detection setting menu is displayed. You can set the motion detection function (page 57).

Note
Motion detection works only when the camera Video mode is set to MPEG4 and the Cropping is set Off.

Effective period
Set the period when the alarm detection is effective.
Always: The alarm detection is always effective.
Schedule: You can specify the period when the alarm detection is effective in the schedule setting in the other section.
Click Schedule and the setting menu for the Effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

OK/Cancel
See “Buttons common to every setting menu” on page 29.

Periodical sending Tab — Setting the periodical mail sending mode
You can set to send mails periodically.

Periodical sending
Select On when you want to send mails periodically. If you select Off, Periodical sending is not executed.

Image file name
Type the file name of the image attached to the mail up to 10 alphanumeric, - (hyphen) and _ (under score).

Suffix
Select a suffix added to the file name used when the mail is sent.
None: The name of the sent file will be the Image file name.
Date & time: The date & time suffix is added to the Image file name.
The date & time suffix consists of lower two-digits of year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits) and second (2 digits), and consecutive number (2 digits), thus 14-digit number is added to the file name.
Sequence number: A consecutive number of 10 digits between 0000000001 and 4294967295 and two fixed digits 00 is added to the Image file name.

Sequence number clear
Click Clear and the suffix of the sequence number returns to 1.

Interval
Type the interval at which you want to send a mail periodically. You can set the hour (H) and minutes (M) between 30 minutes and 24 hours (one day).
Effective period
Set the period when the periodical sending is effective.
Always: The periodical sending is always effective.
Schedule: You can specify the period when the periodical sending is effective in the schedule setting in the other section.
Click Schedule and the setting menu for the effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

OK/Cancel
See “Buttons common to every setting menu” on page 29.

Sending Images to FTP Server
— FTP client setting Menu
When you click FTP client on the Advanced mode menu, the FTP client setting menu appears. Use this menu to set up for capturing and sending still images to an FTP server. By using FTP client function, you can send the image and audio file which has been shot and recorded linked with the external sensor input or with the built-in motion detection function to FTP server. The image file can also be sent periodically. FTP client setting menu is composed of three tabs Common, Alarm sending and Periodical sending.

Common Tab — Setting the FTP Client Function

FTP client function
To activate the FTP client function, select On. The FTP client setting page appears. When you do not wish to use the FTP client function, select Off.

Note
The frame rate and operability on the main viewer may decrease while a file is being transmitted by the FTP client function.

FTP server name
Type the FTP server name to upload still images up to 64 characters, or the IP address of the FTP server.

User name
Type the user name for the FTP server.
Password
Type the password for the FTP server.

Re-type password
To confirm the password, type the same characters as you typed in the Password box.

Passive mode
Set whether you use the passive mode of FTP server or not when connecting to FTP server. Select On to connect to FTP server using the passive mode.

OK/Cancel
See “Buttons common to every setting menu” on page 29.

Alarm sending Tab — Setting the FTP client action when detecting the alarm
Set to forward the image and audio file to the specified FTP server linked with the alarm detection by the external sensor input or by the built-in motion detection function.

Alarm sending
Select On to send the image and audio file to FTP server linked with the alarm detection.

Remote path
Type the path to the destination up to 64 characters.

Image file name
Type the file name you want to assign to the images when sending to the FTP server. You can use up to 10 alphanumeric characters, - (hyphen) and _ (underscore) for naming.

Suffix
Select a suffix to add to the file name.

Date & time: The date & time suffix is added to the Image file name.
The date/time suffix consists of lower two-digits of year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits) and second (2 digits), and consecutive number (2 digits), thus 14-digit number is added to the file name.

Sequence number: A consecutive number of 10 digits between 0000000001 and 4294967295 and an consecutive 2 digits number is added to the Image file name.

Tip
A consecutive number added to Date & time and Sequence number is used to identify each of multiple files created with one alarm event.

Sequence number clear
Click Clear to reset the Sequence number suffix to 1.

Alarm
Select the connected alarm.
Sensor input: The external sensor which is connected to the sensor input of the camera I/O port.
Motion detection: Click Motion detection button, and the Motion detection setting menu is displayed. You can set the motion detection function (page 53).

Note
Motion detection works only when the Video mode is set to MPEG4 and the Cropping is set to Off.

Effective period
Set the period when the alarm detection is effective.
Always: The alarm detection is always effective.
Schedule: You can specify the period when the alarm detection is effective in the schedule setting in the other section.
Click Schedule and the setting menu for the Effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

Alarm buffer
Select Use alarm buffer when you forward the image/audio of before and after the alarm detection (pre-alarm, post-alarm).
If you do not select it, only the image of the moment of the alarm detection is forwarded.

Click Alarm buffer to display the Alarm buffer setting menu.
For details, see “Setting the Alarm Buffer — Alarm buffer setting Menu” on page 56.
OK/Cancel
See “Buttons common to every setting menu” on page 29.

Periodical sending Tab — Setting the Periodical FTP Client Activity
You can set to send an image file to FTP server periodically.

Periodical sending
Select On when you want to use periodical sending. If you select Off, Periodical sending is not executed.

Remote path
Type the remote path up to 64 characters.

Image file name
Type the file name of the image sent to FTP server up to 10 alphanumeric characters, - (hyphen) and _ (under score).

Note
You cannot send the audio file by using the periodical sending function of FTP.

Suffix
Select a suffix to be added to the file name sent to FTP server.
None: The name of the sent file will be the Image file name.
Date & time: The date & time suffix is added to the Image file name.
   The date & time suffix consists of lower two-digits of year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits) and second (2 digits), and consecutive number (2 digits), thus 14-digit number is added to the file name.

Sequence number: A consecutive number of 10 digits between 0000000001 and 4294967295 and two fixed digits 00 is added to the Image file name.

Sequence number clear
Click Clear and the suffix of the sequence number returns to 1.

Interval
Type the interval at which you want to send images to the FTP server periodically. You can set the hour (H), minutes (M) and seconds (S) between 1 second and 24 hours (one day).

Note
The actual interval may be longer than the set value, depending on the image size, image quality setting, bit rate and the network environments.

Effective period
Set the period when the periodical sending is effective.
Always: The periodical sending is always effective.
Schedule: You can specify the period when the periodical sending is effective in the schedule setting in the other section.
Click Schedule and the setting menu for the effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

OK/Cancel
See “Buttons common to every setting menu” on page 29.
Recording Images in Memory
— Image memory setting Menu

When you click Image memory on the Advanced mode menu, the Image memory setting menu appears. By using the image memory function, you can record the image and audio file, which has been shot being linked with the external sensor input or with the built-in motion detection function, to the built-in memory (about 8 MB) of the camera. The image file can also be recorded periodically. The recorded image and audio files can be found or downloaded to the computer using the FTP server function. (See “Downloading Images from the Camera — FTP server setting Menu” on page 52.) Image memory setting menu is composed of three tabs Common, Alarm recording and Periodical recording.

Notes

- The image and audio files recorded in the built-in memory will be erased when the power of the camera is turned off.
- The frame rate and operability on the main viewer may decrease during image storage in the built-in memory.
- When the Overwrite is set to On, a warning mail is not sent to the Administrator.

Common Tab — Setting the Image memory Function

Image memory
Set whether you use the Image memory function or not. When you select On, the Common setting options are displayed in the below. If you do not use it, select Off and click OK.

Free space
Shows the current free space of the built-in memory.

Overwrite
Select to overwrite the file or not when there is insufficient memory space to record the image. Select On to allow overwriting. The oldest file or folder is overwritten first. Select Off to prohibit overwriting. In this case, a new file cannot be stored.

Capacity warning
Select On to send a warning mail to the Administrator when the built-in memory space is low or the memory is full. Select Off if you do not want to send a warning mail.

SMTP server name
Type the name of the SMTP server to use for sending an e-Mail, up to 64 characters. Otherwise type the IP address of SMTP mail server.

Authentication
Select the authentication required if you send a mail. None: Select if no authentication is required when an e-mail is sent. SMTP authentication: Select if authentication is required when an e-Mail is sent. POP before SMTP: Select if POP before SMTP authentication is required when an e-Mail is sent.

POP server name
This is necessary when POP before SMTP is selected in Authentication. Type POP (receiving mail) server name up to 64 characters. Otherwise type the IP address of POP server. This setting is necessary when SMTP server that sends a mail authenticates using the account of POP user.

User name, password
Type the user name and the password of the user who has the mail account. This setting is necessary when SMTP server that sends a mail authenticates.

Administrator e-Mail address
Type the e-Mail address of the recipient of the warning mail (e-Mail address of the camera Administrator), up to 64 characters.
OK/Cancel
See “Buttons common to every setting menu” on page 29.

**Alarm recording Tab — Setting the Image Memory Function when Detecting the Alarm**

You can set to record the image and audio file to the built-in memory linked with the external sensor input or with the built-in motion detection function.

<table>
<thead>
<tr>
<th>Advanced mode</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Common</strong></td>
</tr>
<tr>
<td>Alarm recording:</td>
</tr>
<tr>
<td>Image file name:</td>
</tr>
<tr>
<td>Suffix:</td>

<tr>
<td>Alarm:</td>
</tr>
<tr>
<td>Effective period:</td>
</tr>
<tr>
<td>Alarm buffer:</td>
</tr>
<tr>
<td>OK</td>
</tr>
</tbody>
</table>

**Alarm recording**
Select **On** to set to record the image and audio file to the built-in memory linked with the external sensor input or with the built-in motion detection function.

**Image file name**
Type the file name you want to assign to the images when saving in the built-in memory. You can use up to 10 alphanumeric characters, - (hyphen) and _ (underscore) for naming.

**Suffix**
Select a suffix to add to the file name.
**Date & time:** The Date & time suffix is added to the Image file name.
The Date & time suffix consists of lower two-digits of year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits) and consecutive number (2 digits), thus 14-digit number is added to the file name.
**Sequence number:** A consecutive number of 10 digits between 0000000001 and 4294967295 and an consecutive 2 digits number is added to the Image file name.

**Tip**
A consecutive number added to **Date & time** and **Sequence number** is used to identify each of multiple files created with one alarm event.

**Sequence number clear**
Click **Clear** to reset the Sequence number suffix to 1.

**Alarm**
Select the connected alarm.
**Sensor input:** The external sensor which is connected to the sensor input of the camera I/O port.
**Motion detection:** Click **Motion detection** button, and the Motion detection setting page is displayed. You can set the motion detection function (page 53).

**Note**
**Motion detection** works only when the Video mode is set to MPEG4 and the Croping is set to Off.

**Effective period**
Set the period when the alarm detection is effective.
**Always:** The alarm detection is always effective.
**Schedule:** You can specify the period when the alarm detection is effective in the schedule setting in the other section.
Click **Schedule** and the setting menu for the effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

**Alarm buffer**
Select **Use alarm buffer** when you forward the image/audio of before and after the alarm detection (pre-alarm, post-alarm).
If you do not select it, only the image of the moment of the alarm detection is forwarded.

Click **Alarm buffer** to display the Alarm buffer setting menu.
For details, see “Setting the Alarm Buffer — Alarm buffer setting Menu” on page 56.

**OK/Cancel**
See “Buttons common to every setting menu” on page 29.
Administrating the Camera

**Periodical recording**

Select **On** when you want to use periodical recording. If you select **Off**, the Periodical recording is not executed.

**Image file name**

Type the file name of the image recorded to the built-in memory up to 10 alphanumeric, - (hyphen) and _ (underscore).  

**Note**

You cannot send the audio file by using the periodical recording function.

**Suffix**

Select a suffix to add to the file name.  
**None**: The recording file name will be the Image file name.  
**Date & time**: The date & time suffix is added to the Image file name.  
The date/time suffix consists of lower two-digits of year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits), and consecutive number (2 digits), thus 14-digit number is added to the file name.  
**Sequence number**: A consecutive number of 10 digits between 0000000001 and 4294967295 and two fixed digits 00 is added to the Image file name.  

**Sequence number clear**

Click **Clear** and the suffix of the sequence number returns to 1.

**Interval**

Type the interval at which you want to record an image in the built-in memory periodically. You can set the hour (H), minutes (M) and seconds (S) between 1 second and 24 hours (one day).

**Note**

The actual interval may be longer than the set value, depending on the image size or the network environments.

**Effective period**

Set the period when the periodical recording is effective.  
**Always**: The periodical recording is always effective.  
**Schedule**: You can specify the period when the periodical recording is effective in the schedule setting in the other section.

Click **Schedule** and the setting menu for the effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

**OK/Cancel**

See “Buttons common to every setting menu” on page 29.

**Folder structure of image memory**

When the image memory function is used, the images are recorded with the following folder structure.

```
Root
|-- Date_No.
|   |-- xxxxxxx.m4f
|   |-- yyyyyy.m4f
|   |-- aaaaaa.jpg
|   |-- bbbbbbb.jpg
|   |-- ccccccc.m4f
|   |-- zzzzzzzz.m4f
|   `-- qqqqqqq.m4f

\[\\_\] represents a folder created automatically.  
The Date_No. folder has a 9-digit name consisting of the last two digits of the year (2 digits), month (2 digits), day (2 digits), underscore and sequence number (2 digits).  
In the built-in memory, one folder automatically created can store image files of about 1 MB. If the size of the image files exceeds that value, a new folder is created automatically to continue recording.

**About the extension of a file**

A file to be recorded/sent using the image memory function or the FTP client function has one of the
following three extensions depending on the video mode setting and the recording/sending settings of the camera.

.m4f: Represents the MPEG4 video mode.
.jpf: Represents the JPEG video mode when Use alarm buffer is checked in the alarm recording/alarm sending menu. This file includes audio data.
.jpg: Represents the JPEG video mode when Use alarm buffer is not checked in the alarm recording/ alarm sending menu. This file can be viewed with a normal image viewer.

The SNC video player (page 71) allows playing of “.m4f” and “.jpf” files.

---

## Downloading Images from the Camera — FTP server setting Menu

When you click FTP server on the Advance mode menu, the FTP server setting menu appears. Use this menu to set up for the FTP server function which finds a specified image and audio file stored in the built-in memory of the camera (about 8 MB) or download the still image file from the camera.

### FTP server function
To activate the FTP server function, select **On** and click **OK**. When you do not use the FTP server function, select **Off** and click **OK**.

### OK/Cancel
See “Buttons common to every setting menu” on page 29.

### Note
Note the followings when log in to FTP server of the camera using the FTP client software on the computer.
- The frame rate and the operativity of the monitor window in the main viewer will decline.
- While recording the image using the Image memory function, you cannot delete the recording folder.
- When the recorded image or audio file is deleted, the camera counts the free space of the built-in memory again when logging off.
Setting the Alarm Output — Alarm output setting Menu

When you click Alarm output on the Advanced mode menu, the Alarm output setting menu appears. You can set in this menu to control the alarm out of I/O port on the rear of the camera linked to the alarm detection and the timer.

**Alarm output**

To activate the Alarm output function, select **On**. The basic setting options are displayed below. When you do not use the Alarm output function, select **Off**.

**Mode**

Select the mode of the Alarm output function.

**Alarm**: Controls alarm output by synchronizing with an external sensor input or the built-in activity detection function.

**Timer**: Controls alarm output by the timer.

**Alarm**

This item is displayed when **Mode** is set to **Alarm**. Select the alarm to link the alarm output function. If the selected alarm is detected, the alarm output status changes.

**Sensor input**: External sensor connected to sensor input of the camera I/O port

**Motion detection**: To set the motion detection function, click **Motion detection**. The Motion detection setting page appears (see page 57).

**Effective period**

This item is displayed when **Mode** is set to **Alarm**. Set the period while the alarm detection is effective.

**Always**: The alarm detection is always effective.

**Schedule**: You can specify the period when the alarm detection is effective in the schedule setting in the other section.

Click **Schedule** and the setting menu for the effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

**Alarm duration**

Select the duration for which the alarm output is short-circuited between 1 and 60 sec.

**Effective period**

This item is displayed when **Mode** is set to **Alarm**. Set the period while the alarm detection is effective.

**Always**: The alarm detection is always effective.

**Schedule**: You can specify the period when the alarm detection is effective in the schedule setting in the other section.

Click **Schedule** and the setting menu for the effective period is displayed. (“Setting the Schedule — Schedule setting Menu” on page 55)

**OK/Cancel**

See “Buttons common to every setting menu” on page 29.
Setting the Operations from the Viewer Page — Trigger setting Menu

Click **Trigger** on the Advanced Mode menu to display the Trigger Setting menu.
In this menu, you will select the activities when **Trigger** icon is clicked on the main viewer.

**e-Mail (SMTP)**
Checking this box allows you to select **e-Mail** from the trigger drop-down list in the main viewer.
By selecting **e-Mail** and clicking , a still image of the moment you click is captured, and your e-mail with the image file attached is sent to the specified mail address.

When you click **e-Mail (SMTP)** button, the **Trigger (e-Mail)** setting menu is displayed. You can set necessary options here. The setting options and setting procedures are the same as those of the e-Mail (SMTP) setting menu (page 43).

**FTP client**
Checking this box allows you to select **FTP** from the trigger drop-down list in the main viewer.
By selecting **FTP** and clicking , a still image of the moment you click is captured, and the image file is sent to the FTP server.

When you click **FTP client** button, the **Trigger (setting) FTP client** menu is displayed. You can set necessary options here. The setting options and setting procedures are the same as those of the FTP client setting menu (page 46).

**Image memory**
Checking this box allows you to select **Image memory** from the trigger drop-down list in the main viewer.

---

**Note**
While the Video mode is set to MPEG4, the image of the composite video signal output from the video output connector of the camera may be distorted during mail transmission.
By selecting **Image memory** and clicking 📸, a still image of the moment you click is captured, and the image file is recorded in the built-in memory.

When you click **Image memory** button, the **Trigger (setting) Image memory** menu is displayed. You can set necessary options here. The setting options and setting procedures are the same as those of the Image Memory setting menu (page 49).

### Alarm output
Checking this box allows you to select **Alarm output** from the trigger drop-down list in the main viewer. You can control On (short circuit) or Off (open) by selecting **Alarm output** and clicking the ✂️.

### OK/Cancel
See “Buttons common to every setting menu” on page 29.

---

**Setting the Schedule — Schedule setting Menu**

When you click **Schedule** on the Advanced mode menu, the Schedule setting menu appears. This is the same menu as the setting menu which is displayed when you click **Schedule** to set Effective period and Schedule in FTP client setting menu, e-Mail (SMTP) setting menu, Image memory setting menu, Alarm out setting menu and so on.

Example: When setting e-Mail (SMTP) (the alarm sending) in the Schedule setting menu

**Schedule selection**

The time period on the right of the checked day is the effective period of the schedule.

**Mon (Monday) to Sun (Sunday)**
The time period on the right of the checked day is the effective period of the schedule.

**Start time, End time**
Specify the **Start time** and the **End time**.

**Use the same time schedule every day**
When this is checked, the **Start time** and **End time** set to **Mon (Monday)** are applied to all days. In this case, the **Start time** and **End time** of the other days than **Mon (Monday)** cannot be input.

### OK/Cancel
See “Buttons common to every setting menu” on page 29.
Setting the Alarm Buffer — Alarm buffer setting Menu

When you click **Alarm buffer** on the Advanced mode menu, the Alarm buffer Setting menu appears. You can set the Pre-alarm image and audio (the image and audio before the alarm detection) and the Post-alarm image and audio. These can be set when **Alarm sending** or **Alarm recording** of FTP client setting menu or Image memory setting menu is set to **On**, and besides when **Use alarm buffer** is selected.

![Advanced mode menu](image)

**Video mode**

The Video mode setting in the Common tab of the Camera setting menu is displayed.

**MPEG4:** Shows the present output format of the camera is MPEG4.

**JPEG:** Shows the present output format of the camera is JPEG.

**Recording capacity**

Displays the maximum recording capacity of alarm buffer in the present camera setting of the video mode, image size, bit rate and frame rate.

**Pre-alarm period:** Displays the maximum recording capacity of image/audio before the alarm detection.

**Post-alarm period:** Displays the maximum recording capacity of image/audio after the alarm detection.

**Recording time**

Set the recording time for the Pre-alarm image/audio and Post alarm image/audio.

**Pre alarm period:** Type the recording time of the image/audio before the alarm detection.

**Post alarm period:** Type the recording time of the image/audio after the alarm detection.

**Note**

The value of Recording capacity differs depending on Image size, Bit rate (for MPEG4) and Image quality (for JPEG) in the camera setting menu.

**OK/Cancel**

See “Buttons common to every setting menu” on page 29.
Setting the Motion Detection Function — Motion detection setting Menu

When you click Motion detection on the Advanced mode menu, the Motion detection setting menu appears. You can set the conditions to activate the built-in motion detection function in this menu. This is the same menu with the setting menu which is displayed when you click Motion detection in Alarm sending of e-Mail (SMTP) setting menu, Alarm sending or FTP client setting menu, Alarm recording of Image memory setting menu and so on.

Notes

- The motion detection function can activate or be set only when the Video mode of the camera is set to MPEG4 and the Cropping is set Off.
- Before actual use, perform an operation test and confirm that the Motion detection function works correctly.

Monitor display
You can monitor the moving image and set the detection Window.

Window 1 to 4 check box
When you check it, the specified Window is displayed on the monitor display.

Threshold slider bar
Set the Threshold level so as to judge whether there has been any motion in the camera image or not. You can change the Threshold level displayed in the Motion detection indicator.

Motion detection indicator
The moving level of the present shooting image inside the specified Window is shown in the graph. The even line shows the threshold level for Motion detection which will be a guide to set the sensitivity properly.

Sensitivity slider bar
Use it to set the detection sensitivity of the monitoring image.
When the slider bar is moved to the left end, the sensitivity will be 0 and any motion will not be detected. The right end is the maximum sensitivity.

OK button
Click to send the set values to the camera and confirm the settings.

Setting the Motion Detection Area, Sensitivity and Threshold level
Set the motion detection working area, the sensitivity and the threshold level as follows:

1. Check Window 1 check box. Window 1 is shown on the monitor display.
2. Set Window 1 in the area you want to set Motion detection. Click and drag Window 1 to move it or change the size of it.
3. Set the Sensitivity of Motion detection. Adjust it referring to the level indicator of Motion detection. To increase the sensitivity, move the Sensitivity slider bar to the right. To decrease, move it to the left. When you release the mouse, the new setting is applied to the level of motion detection indicator.
4. Set the Threshold level of Motion detection. Adjust the Threshold slider bar in the same way of step 3 to set the level the camera executes motion detection.
5. If necessary, set the Motion detection working areas, the sensitivities and the Threshold level of the other Windows 2, 3, 4 by following steps 1 to 4.
6. After all settings, click OK.
**Notes**

- While motion detection setting menu is displayed, motion detection of Mail (SMTP), FTP client, Image memory and Alarm output notification will not work. Make sure to close Motion detection setting menu after setting.
- Before using the Motion detection, perform the operation test to confirm correct operation.
- The Motion detection may not operate correctly in the following cases:
  - while changing a setting on the Camera setting menu
  - when the object is dark
  - when the camera is installed in an unstable place that causes vibration to the camera
  - when a small bit rate (64 kbps, 128kbps) is selected in **Bit rate** setting of MPEG4
Using DDNS Service — DDNS Setting Menu

Click DDNS of Administrator Menu to display the DDNS setting menu. In this menu you can use the Network Camera DDNS Service and link the camera host name to the domain name. If you use this service, you can access the camera using an URL such as “http://(your host name).snccam.net”. For details of DDNS service, access the following URL.

URL: http://www.register-snccam.net/

Note
To use this function, the camera must be connected to the Internet.

To use this function, you need knowledge of broadband router and port forwarding. The following shows an example of the most basic system configuration for using the network camera in the Internet.

Set up the camera and broadband router (hereinafter called router) as follows in the DDNS setting menu page before registering for DDNS service.

1. Connect the camera to the router, and set up the network. Refer to “Assigning the IP Address to the Camera” (page 7) of “Preparation” or “Configuring the Network — Network setting Menu” (page 38).

   Note
   Be sure to perform DNS setting for the camera. Type the IP address assigned by the Internet Service Provider in the Primary/Secondary DNS server.

2. Open the setup window of the router, and set the port forwarding to the IP address set in the camera. (For example: For the settings in the diagram above, set as follows. Port 80 ↔ Private IP address 192.168.1.110)

   Notes
   • Refer to the User’s Guide provided with the router for details of port forwarding setup. Port forwarding may not be supported on some routers, or may be called by a different name. If necessary, contact the router manufacturer for details.
   • If using a port other than 80, set the same port number (in the range 1024 to 65535) in the camera’s setting menu and for port forwarding on the router.
3 On the router’s setup menus, check the global IP address (for example, xyz.37.128.50 in the above diagram) on the WAN side currently assigned by the provider. Type the global IP address in the PC browser and check if you can access the camera.

**Notes**

- To specify a port number other than 80 for port forwarding, type a colon (:) after the global IP address and then type the port number. (For example: http://xyz.37.128.50:1024)
- On some routers, you cannot access the WAN side global IP address via a network on the LAN side of the router. In this case, check it using another Internet access.
- After the above setup, the camera can be accessed from any computer connected to the Internet. If you want to restrict access to the camera, perform the user setting and security setting procedures in the camera setting menus.
- If you cannot access the camera after performing the above setup, consider the following possibilities.
  - The IP address that the provider assigns may not be a global IP address.
  - The port number (for example, Port 80) set for port forwarding may be blocked by the Internet Service Provider. Check with the provider.
  - The port number set for port forwarding may be blocked by security software or a firewall installed in the computer.

4 Click **DDNS** of the Administrator setting menu to display the DDNS setting menu.

**[DDNS]**
Select whether to use the dynamic DNS function or not by on or off. Even after you have registered for the dynamic DNS service, set it to off when you are not using it.

**[DDNS ID]**
This is the ID special for the equipment which is used for the dynamic DNS service. It is used when you proceed with New registration, Modify/Unregister, Forgot password and so on in the registration site.

When you access the registration site through the DDNS setting menu page, the DDNS ID will have already been input.

**[Password]**

**[Re-type password]**
Type the password set for dynamic DNS access. It must consist of 6 to 16 characters, including letters of the alphabet and numerals.

**[New registration]**
It is used when you proceed with New registration for the dynamic DNS service. For details, refer to the instructions below.

**[Modify registration/Unregister]**
This is used to jump to the Modify/Unregister page of the registration site. For details, refer to “Modify Registration/Unregister Process” given in the registration site (http://www.register-snccam.net).

**[Forgot password]**
This is used to jump to the Forgot password page of the registration site.

**[Refresh IP address]**
This is used when you proceed with manual updating of the IP address for the DDNS server. The camera routinely proceeds with updating of the IP address at about hourly intervals, so you do not need to use this button.

When you have pressed the reset button or proceeded with Factory default after registration for dynamic DNS, you can restart the dynamic DNS service by this button.
In the DDNS setting window of the camera, select **On** of DDNS, type **Password** and **Re-type password**, and then click **OK**.

The password for the DDNS service is saved in the camera, and it prepares for DDNS service registration.

**Note**

When using the DDNS function, the serial number of camera, MAC address and IP address will be sent to the server. You should agree it before you go to the next step.

Click the **Register** button to proceed with new registration for the DDNS service. The camera proceeds with “Product information registration” for the registration server to prepare for your registration for DDNS service.

When “Product information registration” is done properly, the new window of the browser is displayed and a “New registration” display of the registration site opens. Type the same DDNS ID and password as in the DDNS setting menu of the camera, then click **Next**.

**Note**

A DDNS ID has been already input when the window is displayed. You do not have to input it.

**Note**

When using the DDNS function, the serial number of camera, MAC address and IP address will be sent to the server. You should agree it before you go to the next step.

Click the **Register** button to proceed with new registration for the DDNS service. The camera proceeds with “Product information registration” for the registration server to prepare for your registration for DDNS service.

When “Product information registration” is done properly, the new window of the browser is displayed and a “New registration” display of the registration site opens. Type the same DDNS ID and password as in the DDNS setting menu of the camera, then click **Next**.

**Note**

A DDNS ID has been already input when the window is displayed. You do not have to input it.

**Note**

When using the DDNS function, the serial number of camera, MAC address and IP address will be sent to the server. You should agree it before you go to the next step.

Click the **Register** button to proceed with new registration for the DDNS service. The camera proceeds with “Product information registration” for the registration server to prepare for your registration for DDNS service.

When “Product information registration” is done properly, the new window of the browser is displayed and a “New registration” display of the registration site opens. Type the same DDNS ID and password as in the DDNS setting menu of the camera, then click **Next**.

**Note**

A DDNS ID has been already input when the window is displayed. You do not have to input it.

**Note**

When using the DDNS function, the serial number of camera, MAC address and IP address will be sent to the server. You should agree it before you go to the next step.

Click the **Register** button to proceed with new registration for the DDNS service. The camera proceeds with “Product information registration” for the registration server to prepare for your registration for DDNS service.

When “Product information registration” is done properly, the new window of the browser is displayed and a “New registration” display of the registration site opens. Type the same DDNS ID and password as in the DDNS setting menu of the camera, then click **Next**.

**Note**

A DDNS ID has been already input when the window is displayed. You do not have to input it.
9 Verify the entered registration information, then click **Request Registration**.
A message appears, advising that your registration request has been accepted and that a confirmation e-Mail has been set.

10 The confirmation e-mail should arrive at the e-mail address you specified for your registration. Within one hour of clicking the **Request Registration** button, access the URL provided in the e-mail.

11 Registration is now complete.
It takes a few minutes until the host name is reflected to the system. You can then access and check.
This section explains how to use the application software and commands, including the supplied CD-ROM.

**Using the Supplied Setup Program**

Explains the functions except the Network tab in the Setup Program.

To install the Setup Program, to assign the IP address and to set the network, see “Assigning the IP address to the Camera” on page 7 in “Preparations”.

**Notes**

- The IP Setup Program may not operate correctly if you use a personal firewall or antivirus software in your computer. In that case, disable the software or assign an IP address to the camera using another method. For example, see “Assigning the IP Address to the Camera Using ARP Commands” on page 74.
- If you are using Windows XP Service Pack 2 or Windows Vista, disable the Windows Firewall function. Otherwise the IP Setup Program will not operate correctly. For the setting, see “Configuring Windows Firewall” in “When using Windows XP Service Pack 2” on page 10 or “Configuring Windows Firewall” in “When using Windows Vista” on page 12.

**Starting the Setup Program**

Select **Program** from Start menu of Windows, then select **Program, IP Setup Program** and **IP Setup Program** in sequence.

The IP Setup Program starts. Network tab appears. The IP Setup Program detects cameras connected to the local network and lists them on the Network tab window.

When you are using Windows Vista, message “User Account Control – An unidentified program wants access to your computer” may appear. In this case, click **Allow**.

**Bandwidth Control Tab**

The communication bandwidth can be set when the Video mode of the camera is set to **JPEG**.

**Note**

When the Video mode of the camera is set to **MPEG4**, the bandwidth cannot be changed.

1. Click the Bandwidth control tab to display the bandwidth setting window. The current bandwidth is displayed in **Current bandwidth**.

2. Click to select the camera to set the bandwidth from the list box.

3. Click to select the desired bandwidth from the **Setting bandwidth** list box.

4. Type the **Administrator name** and **Administrator password** in each box. The factory settings of both items are “admin.”

5. Click **OK**. If “Setting OK” is displayed, the bandwidth setting is completed.
**Date time Tab**

You can set the date and time on the camera.

1. Click the Date time tab to display the date/time setting window.

2. Click to select the camera you want to set the date and time for.
   
   You can select multiple cameras and set the date and time simultaneously.

3. Select the date/time format from the Date time format drop-down list.

4. Select the area where the camera is installed from the Time zone selecting drop-down list.

5. Set the date and time.
   
   You can set the date and time in two ways.

   **Manual current date time setting**
   
   Set the current date and time on the Manual current date time setting boxes, and click OK. The setting boxes are for the year (last two digits), month, date, hour, minutes and seconds from left to right.

   **PC current date time setting**
   
   The date and time set on the computer is displayed in the PC current date time setting box. Click OK on the right to set the camera’s date and time to the displayed computer’s date and time.

**Note**

Due to network properties, there may be a slight difference between the displayed computer's date and time and those set on the camera.

---

**PPPoE Tab**

PPPoE is used to connect to an ISP (Internet Service Provider) via the Internet. Using PPPoE, you can automatically obtain an IP address to connect to the Internet from the ISP.

The following PPPoE setting items are provided for the SNC-P1:

- User ID assigned by your ISP
- Password for the user ID
- DNS setting (automatic/manual setting)

1. Click the PPPoE tab to display the PPPoE setting window.

2. Click to select the camera you want to make the PPPoE settings for.

3. Select On below the list to enable the PPPoE setting. To disable the PPPoE setting, select Off.

4. Type the user ID assigned by the ISP in the User ID box.

5. Type the password for the user ID in the Password box.
Others

Using the SNC audio upload tool — Transmitting Audio to Camera

The supplied SNC audio upload tool allows you to transmit sound from the computer to the camera.
This section explains the setup and operations of the SNC audio upload tool.

The SNC audio upload tool supports the following audio data to be transmitted.

<table>
<thead>
<tr>
<th>Audio CODEC</th>

**Note**
Only one user can transmit sound to the camera. Meanwhile, another user will not be able to transmit sound to the camera.

**Installing the SNC audio upload tool**

1 Insert the CD-ROM in your CD-ROM drive.
A cover page appears automatically in your Web browser.
If it does not appear automatically in the Web browser, double-click on the index.htm file on the CD-ROM.

When you are using Windows Vista, pop-up “AutoPlay” may appear. For details, “Installing software” in “When using Windows Vista” on page 11.

2 Click the **Setup** icon of **SNC audio upload tool**.
The “File Download” dialog opens.

When you are using Windows XP Service Pack 2 or Windows Vista, a message regarding the active contents may appear. For details, see “Installing software” in “When using Windows XP Service Pack 2” on page 9 or “Installing software” in “When using Windows Vista” on page 11.

3 Click **Open**.

---

Rebooting the Camera

Click **Reboot** on the Network tab to reboot the camera. It will take about two minutes to start again.

Retype the password for the user ID in the **Re-type password** box.

Set the DNS server address.

To obtain the DNS server addresses automatically:
Select **Obtain DNS server address automatically**.

To specify the DNS server addresses manually:
Select **Use the following DNS server address**, and type the Primary DNS server address and Secondary DNS server address in each box.

Type the **Administrator name** and **Administrator password** in each box.
The factory settings of both items are “admin.”

Click **OK**.
If “Setting OK” is displayed, the PPPoE setting is completed.
Using the SNC audio upload tool — Transmitting Audio to Camera

1. Select **Sound** from Control Panel.

2. Open the Recording tab and check that Windows has recognized the hardware correctly.

Using the SNC audio upload tool

When you start the SNC audio upload tool, the Setting tab is displayed.

Setting tab

Use this menu to set the camera to transmit audio from a computer or upload an audio file.

### Connecting the Camera to the Computer

1. Connect a speaker to the "Line output" jack on the camera.

2. Connect a microphone to the microphone input jack on the computer.

### Note

If you click “Save this program to disk” on the “File Download” dialog, you cannot install the tool correctly. Delete the downloaded file, and click the **Setup** icon again.

4. Install the SNC audio upload tool following the wizard displayed.
   If the Software License Agreement is displayed, read it carefully and accept the agreement to continue with the installation.

### Connecting the Camera to the Computer

1. Connect a speaker to the "Line output" jack on the camera.

2. Connect a microphone to the microphone input jack on the computer.

### Note

If the microphone input jack of the computer is not set correctly, no sound is transmitted from the computer and nothing is output from the speaker connected to the camera.
Set the microphone input jack from the control panel of Windows.

**On Windows 2000**

1. Select **Sounds and Multimedia** from Control Panel.

2. Click **Volume** in the **Sound Recording** section on the Audio tab.
   The Recording Control window opens

3. Check **Select** in the **Microphone** section.

**On Windows XP**

1. Select **Sounds and Audio Device** from Control Panel.

2. Click **Volume** in the **Sound Recording** section on the Audio tab.
   The Recording Control window opens.

3. Check **Select** in the **Microphone** section.

**On Windows Vista**

There are no settings regarding the microphone jack.
If recording cannot be made, connect a microphone device to the computer and check that the recording device operates correctly, as follows.

**User**

Set the **User ID** and **Password** for the administrator.
The factory setting of the User ID for the Administrator is “admin,” and the Password is “admin.”

**Single sign-on:** Select **On** to use the same user ID and same password for all the cameras. Select **Off** to set the user ID and password individually for each camera.
For the setting with **Off**, see “User ID/Password” on page 67.

**User ID:** This item can be set when **Single sign-on** is set to **On**. The user ID specified here is applicable to all cameras.

**Password:** This item can be set when **Single sign-on** is set to **On**. The administrator password specified here is applicable to all cameras.

**Proxy**

Check this box when you use a proxy server for communications. When it is not checked, direct communications with the camera is performed.
Auto detect: Select On to obtain the proxy setting automatically from Internet Explorer.

Proxy address: Type the IP address or host name of the proxy server.

Proxy port: Type the port number used for communications with the proxy server.

Note
The Proxy setting is applicable to all cameras. You cannot use individual proxy settings for each camera.

Codec
Select the audio mode (Codec) from the drop-down list.

Save camera setting
Check this box to store the current settings and camera list in the Setting tab. The same settings will be recalled when the camera is rebooted.

Click this button to hide the camera list. Click it again to display the camera list.

Target camera(s) (Camera list)
When the SNC audio upload tool starts, it automatically detects Sony network cameras connected to the local network and displays them in the camera list. Up to 256 cameras can be displayed in the list. Select the check box on the left of the row to enable audio transmission and audio file uploading for that camera. You can then enable these functions simultaneously for multiple cameras.

Notes
- If you are using Windows XP Service Pack 2 or Windows Vista, disable the Windows Firewall function. Otherwise the camera list may not be displayed automatically. For details, see “Configuring Windows Firewall” in “When using Windows XP Service Pack 2” on page 10 or “Configuring Windows Firewall” in “When using Windows Vista” on page 12.
- The SNC audio upload tool cannot detect the cameras that are connected to the local network after the program has started.
- The SNC audio upload tool cannot detect the network cameras that are not equipped with the audio feature.

Camera select checkbox: The check box is located on the left end of the row. Select this check box to enable audio transmission and audio file uploading for that camera.

MAC address: Displays the MAC address of the network camera.

IP address: Displays the IP address of the network camera. “DHCP” is shown at the end of the IP address when the IP address is obtained with a DHCP server.

Model: Displays the model name of the network camera.

Serial: Displays the serial number of the network camera.

User: Displays the specified user ID and password. The password is shown with turned letters.

Select all
Click to select all the cameras in the camera list. This is usable when you delete all the cameras from the list or specify the same user ID and password for all the cameras.

User ID/Password
Use this item when you specify the user ID and password to communicate with the selected camera(s) only. Select the camera(s) from the camera list and click this button, and the following dialog opens. Type the user ID and password for the administrator and click OK.

Note
If you select multiple cameras from the camera list, the same user ID and password are set for all the selected cameras. The factory settings of both items are “admin.”

Add
Use this item when you add a new network camera to the camera list manually. Click this button, and the following dialog opens.
Type the IP address and port number for the camera to be added and click OK.

**Add**

- **Camera address**
- **Camera port**

**OK**  **Close**

**Notes**
- An error dialog appears if the specified IP address already exists in the camera list, is assigned for a device other than the network camera, or does not exist in the network.
- You cannot add new cameras if the maximum of 256 cameras has been displayed in the camera list.

**Delete**
Click this button to delete the selected camera(s) from the camera list.

**Note on switching the tab**
If an error occurs when you switch from the Setting tab to the Audio upload tab or the Voice alert tab, the camera is shown in red. In this case, check the camera settings and the user ID and password settings.

**Audio upload tab**
Use this menu to transmit audio from the computer to the camera. You can transmit audio to multiple cameras displayed in the camera list simultaneously.

Before transmitting, set **Speaker output** to On on the Common tab of the Camera menu.

**▶ (start) / ■ (stop)**
Click **▶ (start)** to start audio transmission. The transmission speed is displayed in the Bitrate box during transmission. You can adjust the microphone volume and enable/disable the muting, if necessary.

To stop the audio transmission, click **■ (stop).**

**Notes**
- Audio transmission stops if you switch the tab during the transmission.
- Audio may be interrupted when the IP address is changed if Obtain an IP address automatically (DHCP) is set on **IP address** in the Network setting menu.
- Audio may be interrupted if you transmit it to many cameras simultaneously.

**Sound adjustment and indicators**
Adjust the microphone input volume by moving the slider bar. You can adjust the volume even during transmission.

Click **to enable/disable sound muting. The microphone input volume is displayed at the Level. The transmission rate is displayed in the Bitrate box.**

Click this button to hide the camera list. Click it again to display the camera list.

**Target camera(s) (Camera list)**
Displays the cameras selected with the camera select checkbox of the camera list in the Setting tab.
The list shows the information and status of the selected cameras.
**IP address**: Displays the IP address of the network camera. “DHCP” is shown at the end of the IP address when the IP address is obtained with a DHCP server.

**Model**: Displays the model name of the network camera.

**Serial**: Displays the serial number of the network camera.

**Status**: Displays the current status of the camera.
- **Ready**: The camera is ready for connection.
- **Connected**: The camera connection is successful.
- **Fault**: The camera connection is unsuccessful.
- **Sending**: Audio data being transmitted
- **Down**: Transmission is interrupted due to a network problem.

**Voice alert tab**

Use this menu to record the sound through the microphone connected to the computer and upload the recorded audio file to the camera. You can upload the audio file to multiple cameras selected from the camera list simultaneously.

When you click it during playback, playback stops and the progress bar display returns to the start position.

**Voice alert number select**

Specify the voice alert number to which you want to upload the audio file. For example, select 1 when uploading to voice alert 1.

The name of the uploaded audio file is displayed to the right of the number.

“Not uploaded” is displayed if no audio file is uploaded to the camera.

**Notes**

- Recording or playback stops if you switch the tab during recording or playback.
- The recorded file is not stored in the computer.

**Recording/playback progress bar**

You can check recording or playback progress with this bar. During recording, the right end of the bar represents 30 seconds and the remaining recording time is displayed below the bar. During playback, the maximum time of the bar depends on the recorded time.

**To start recording of the sound input to the computer microphone. The maximum recording time is 30 seconds.**

The codec specified in the Setting tab is used for the recording.

The recorded file is displayed as “RecordedFile.vof.”

Click to start recording of the sound input to the computer microphone. The maximum recording time is 30 seconds.

The codec specified in the Setting tab is used for the recording.

The recorded file is displayed as “RecordedFile.vof.”

- **(playback)**
  To start playback, open the recorded file or another audio file and click this icon.
  You can check the recorded sound or the contents of the selected audio file. During playback, the progress bar shows playback progress.

- **(stop)**
  Click to stop recording or playback.
  When you click it during recording, recording stops, and you can review the recorded sound or upload the recording to the camera.

- **(file open)**
  Click to select a previously saved audio file. You can play the selected audio file or upload it to the camera.

- **(save)**
  Click to save the recorded audio file to the computer.
The audio file name will be “RecordedFile” + “Voice alert number” + “.vof” if you upload an audio file recorded using and not stored in the computer.

**Notes**

- The voice alert number select is disabled if the camera specified in the Setting tab has old-version software.
- The audio file name for the camera selected in the camera list is displayed here. To check the uploaded file name, click on the camera in the camera list.
- The audio file is uploaded to the same voice alert number on all the cameras in the camera list. If the camera has old-version software, the audio file is automatically uploaded to voice alert number 1.

(upload)
Click to upload the recorded or selected audio file to the camera specified in the Setting tab. Only one audio file can be uploaded to the camera at a time.

**Note**
Uploading a new audio file overwrites the audio file previously uploaded to the camera.

( )
Click this button to hide the camera list. Click it again to display the camera list.

**Target camera(s) (Camera list)**
Displays the cameras selected with the camera select checkbox of the camera list in the Setting tab. The list shows the information and status of the selected cameras.

**IP address:** Displays the IP address of the network camera. “DHCP” is shown at the end of the IP address when the IP address is obtained with a DHCP server.

**Model:** Displays the model name of the network camera.

**Serial:** Displays the serial number of the network camera.

**Progress:** Displays the progress of audio file transmission.

**Status:** Displays the current status of the camera.
- **Ready:** The camera is ready for connection.
- **Inquiry:** The camera information is being asked for.
- **No func:** The camera does not support the Voice alert function.
- **Uploading:** The audio file is being uploaded.
- **Fault:** The audio file uploading is unsuccessful.
- **Succeeded:** The audio file uploading is successful.

**Uploading the recorded audio file to the camera**

**Tip**
Before operating, create an audio file and set the camera for audio uploading. Set the camera using the Setting tab.

1. Click (recording) in the Voice alert tab to start recording.
2. Click (stop) to stop recording. Recording will stop automatically in 30 seconds.
3. Select the voice alert number.
4. Click (upload) to transmit the audio file to the camera.

**Saving the recorded audio file to the computer**

1. Click (recording) in the Voice alert tab to start recording.
2. Click (stop) to stop recording. Recording will stop automatically in 30 seconds.
3. Click (save). The Save as dialog appears. Type the file name and save it.

**Uploading the saved audio file to the camera**

1. Click (file open) in the Voice alert tab and select the audio file to be uploaded.
2. Select the voice alert number.
3. Click (upload) to transmit the audio file to the camera.
Using the SNC video player — Playing Video/Audio File Recorded on Camera

The supplied SNC video player allows you to play video/audio data recorded on the camera with your computer. This section explains the setup and operations of the SNC video player.

**Downloading the SNC video player**

To download the SNC video player, click the Player icon located on the upper part of the main viewer of the camera. Type the user name and password for the administrator on the download dialog and click OK. (The factory settings of both items are “admin”.) On the “File Download” dialog, click Save. The SNC video player is saved in the computer.

**Note**

To operate the SNC video player, a special DLL file is necessary. This file is automatically installed in the computer when you view camera images with the ActiveX viewer.

**Using the SNC video player**

1. Double-click the SNC video player downloaded from the camera to start this application.

2. Click the icon. The Select File dialog opens.

3. Select the file you want to play. Information boxes on the selected file are displayed on the left side of the window as follows: Each click on the (information) icon switches between “display” and “Not to display” of the file information.

   **File information**
   - **Model name**: Model name of the camera with which the file is recorded.
   - **IP address**: IP address of the camera with which the file is recorded.
   - **Serial number**: Serial number of the camera with which the file is recorded.
   - **Record event**: Type of event used for the recording: **Sensor input** or **Motion detection**.
   - **Date&time**: Recording date and time
   - **Movie**: Video Codec
   - **Audio**: Audio Codec

**Playing a video/audio file**

Click (start) to start playing from the beginning of the selected file. To freeze the movie temporarily, click (pause). Click (start) again to restart playing. To stop playing, click (stop). To restart playing, click (start) again. Play stops when the file is played to the end.

**To play from a specified point**

Move the slider bar below the image display, and the file will play starts according to the position of the slider bar position.

**Adjusting the sound**

Adjust the playing sound volume by moving the slider bar. Move it to the left end for the minimum volume, and to the right end for the maximum volume. Click the speaker icon to enable/disable the sound muting. When the sound muting is on, no sound is heard even if you move the slider bar to the right.

**Saving an image**

Click (capture) icon during playing or pause and the captured image is displayed on a pop-up dialog. To save the image, click Save on the dialog. You can specify the destination to which the image is to be stored and select the JPEG or Bitmap format.
Using the Custom Homepage Installer

You can store the homepage that you have created in the camera and watch it.

Notes on creating the homepage
When you are creating the homepage, note the following points.
- The file name should be typed up to 24 characters including the extension.
- The file size of the homepage should be 2.0 MB or less.
- To see the created homepage, set the Default URL in the System setting menu.

Uploading the homepage to the camera using the Custom Homepage Installer

1. Insert the CD-ROM in your CD-ROM drive. A cover page appears automatically in your Web browser. If it does not appear automatically in the Web browser, double-click on the index.htm file on the CD-ROM.

   When you are using Windows Vista, pop-up “AutoPlay” may appear. For details, “Installing software” in “When using Windows Vista” on page 11.

2. Click the Start icon of Custom Homepage Installer. The “File Download” dialog opens.

   When you are using Windows XP Service Pack 2 or Windows Vista, a message regarding the active contents may appear. For details, see “Installing software” in “When using Windows XP Service Pack 2” on page 9 or “Installing software” in “When using Windows Vista” on page 11.

3. Click Open. The installer starts and notes are displayed.

   When you are using Windows Vista, message “User Account Control – An unidentified program wants access to your computer” may appear. In this case, click Allow.

4. Read the notes carefully, and click Next. The Software License Agreement is displayed.

   If you click “Save this program to disk” on the “File Download” dialog, the CustomHomepageInstaller.exe file will be saved on the computer. Double-click the saved file to start it.
5. Read the agreement carefully, select Agree if you accept it, then click Next.

6. Type the IP address of the camera to be uploaded in the IP address box.

7. Specify the HTTP port No. of the camera. Initial HTTP port No. is set to 80.

8. When you use a proxy server, set the following:
   For the proxy server of your environments, consult your network administrator.

   **When using an HTTP proxy server:**
   Select Use HTTP proxy server, and type your settings in the Proxy server address and Proxy server port No. boxes.

   **When using an FTP proxy server:**
   Select Use FTP proxy server, and type your settings in the Proxy server address and Proxy server port No. boxes.

9. Type the Administrator name and Administrator password of the camera to be uploaded.
   The factory settings of both items are “admin.”

10. Confirm that all items are correct, then click Next.

11. Type the path for the folder in which your homepage is stored in the Source folder box, then click Next.

12. Click OK.
   Uploading of the homepage file starts.

   **Note**
   Do not turn off the camera until the camera is rebooted after uploading the homepage file.
Assigning the IP Address to the Camera Using ARP Commands

This section explains how to assign an IP address to the camera using ARP (Address Resolution Protocol) commands without using the supplied IP Setup Program.

Note

When you turn on the camera, execute the ARP and PING commands within 5 minutes. Also when you restart the camera, execute the operation within 5 minutes.

1. Open the command prompt on the computer.
2. Enter the IP address and the MAC address of the camera to assign a new IP address, using the following ARP commands.

```
Example:

arp -s <Camera's IP address> <Camera's MAC address>
ping -t <Camera's IP address>
```

3. When the following line is displayed on the command prompt, hold down Ctrl and press C. The display stops.

```
Reply from 192.168.0.100:bytes=32 time...
```

You will normally receive a reply after about 5 repetitions of “Request time out.”

4. Wait until the execution of PING finishes, then input the following code.

```
arp -d 192.168.0.100
```

Note

If you do not receive a reply, check the following:
- Did you enter the ARP commands within 5 minutes after it was turned on?
- If not, turn off the camera and restart the operation.
- Is the NETWORK indicator on the camera flashing?
- If the indicator goes off, the network connection has a problem. Connect the network correctly.
- Did you enter the IP address previously used for another device?
- Assign a new IP address to the camera.
- Do the computer and the camera have the same network address?
- If not, set the same network address on the computer and the camera.
Using the SNMP

This unit supports SNMP (Simple Network Management Protocol). You can read MIB-2 objects and write some MIB-2 objects using software such as SNMP manager software. This unit also supports the coldStart trap which occurs when the power is turned on or the unit restarts, and the Authentication failure trap which informs of an illegal access using SNMP. Using CGI commands, you can set community name and access limitation, reading/writing right, host to send traps, and some MIB-2 objects. To allow these settings, you need authentication by the camera administrator.

1. Inquiry Commands

You can check the SNMP Agent settings using the following CGI commands.

<Method>
GET, POST

<Command>
"http://ip_adr/snmpdconf/inquiry.cgi?inqjs=snmp
(JavaScript parameter format)
http://ip_adr/snmpdconf/inquiry.cgi?inq=snmp
(standard format)

With the above inquiry, you can obtain the following setting information. The following explains the setting information using the inqjs=snmp (JavaScript parameter) format.

- `var sysDescr="SONY Network Camera SNC-P1"` ... describes the case of “mib-2.system.sysDescr.0”. You cannot change this parameter.
- `var sysObjectID="1.3.6.1.4.1.122.8501"` ... describes the case of “mib-2.system.sysObjectID.0”. You cannot change this parameter.
- `var sysLocation=""` ... describes the case of “mib-2.system.sysLocation.0”. This field is used to describe information on the location of this camera. Nothing is set at the factory.
- `var sysContact=""` ... describes the case of “mib-2.system.sysContact.0”. This field is used to describe the information on administrator of this camera. Nothing is set at the factory.
- `var sysName=""` ... describes the case of “mib-2.system.sysName.0”. This field is used to describe administration node of this camera. Nothing is set at the factory.
- `var snmpEnableAuthenTraps="1"` ... describes the case of “mib-2.snmpEnableAuthenTraps.0”. This example shows when “1” (enable) is set. With this setting, a trap occurs when there is an Authentication failure. When “2” (disable) is set, no Authentication failure trap occurs.
- `var community="public,0.0.0.0,read,1"` ... describes the community name and the reading/writing attributes. This example shows the identification number “ID=1”, the community name public, and enables read from any IP address (0.0.0.0).
- `var community="private,192.168.0.101,write,2"` ... describes the community name and the reading/writing attributes, similarly to 7. This example shows the identification number ID=2, the community name “private”, and enables “read/write” by the SNMP request packet from the host “192.168.0.101”.
- `var trap="public,192.168.0.101.1"` ... describes the host name to send a trap. This example shows the identification number “ID=1”, the community name “public”, and enables sending of traps to the host having the IP address “192.168.0.101”.

2. Setting Commands

The unit supports the following setting commands of SNMP.

<Method>
GET, POST

<Command>
http://ip_adr/snmpdconf/snmpdconf.cgi?

First, perform the settings of the following parameters.

1) `sysLocation=<string>`
   Set the case of “mib-2.system.sysLocation.0” in the <string> position. The maximum length of <string> is 255 characters.

2) `sysContact=<string>`
   Set the case of “mib-2.system.sysContact.0” in the <string> position. The maximum length of <string> is 255 characters.
3) sysName=<string>
Set the case of “mib-2.system.sysName.0” in the <string> position. The maximum length of <string> is 255 characters.

4) enaAuthTraps=<value>
Set the case value of “mib-2.snmp.snmpEnableAuthenTraps.0” in the <string> position. Type “1” (enable) or “2” (disable) in the <value> position.

5) community=<ID>,<rwAttr>,<communityName>,<IpAddressString>
Set the community name and the reading/writing attributes. <ID> describes the setting identification number (1 to 8), <rwAttr> describes a character representing the reading/writing attribute (“r”, “R”, “w” or “W”), <communityName> describes the community name to be set, and <IpAddressString> describes the IP address of the host you allow access (0.0.0.0 for any host).

Example: To allow reading/writing by any host in the “private” community and having the ID number “2”.
community=2,w,private,0.0.0.0

6) trap=<ID>,<communityName>,<IpAddressString>
Set the host you want to send traps to. <ID> describes the setting identification number (1 to 8), <communityName> describes the community name to send traps to, and <IpAddressString> describes the IP address of the host to send traps to.

Example: To specify the destination of traps as the private community and the ID number “1”.
trap=1,public,192.168.0.101

7) delcommunity=<ID>
This parameter is used to delete the previous community setting. <ID> describes the community setting identification number (1 to 8).

8) deltrap=<ID>
This parameter is used to delete the previous setting of the host to send traps to. <ID> describes the trap setting identification number (1 to 8).

When you have finished changing the SNMP setting information using the above parameters 1) to 8), check the changed settings using an inquiry commands. If the changed settings are OK, restart the SNMP using the following CGI command.

SNMP restart command

<Method>
GET, POST
Glossary

ActiveX control
A component program object that can be used with web pages or other application programs. The technology for creating ActiveX control is part of software developed by Microsoft.

ARP commands
The commands for checking the entry of the IP address and MAC address in a host computer, or for updating them.

Bandwidth control
To limit the amount of transmitted data.

Bit rate
The rate at which data bits are transmitted.

Capture
To display the audio and video digital data from the video equipment on a computer.

Codec
Software/hardware for coding/decoding video and audio data.

Contrast
The difference in tone between the lightest and darkest portions of the image.

Default gateway
Device that can be used to access the other network.

DHCP server
Abbreviation for Dynamic Host Configuration Protocol server. The IP address of a terminal without an individual IP address can be automatically distributed by the Dynamic Host Configuration Protocol (DHCP). The DHCP server assigns the IP addresses to the terminals.

Digital zoom
Zooming in/out function of an image without using an optical zooming function.

DNS server
Abbreviation for Domain Name System server. As an IP address required for connecting to the device on an IP network is numerical and difficult to remember, the Domain Name System was established. A domain name is alphabetic and is easier to remember. When a client computer uses a domain name to connect to another computer, it asks a DNS server to translate the name into the corresponding IP address. Then the client computer can obtain the IP address of the computer to be connected.

Frame rate
The number of frames of a moving image that can be transmitted per a second.

FTP client
Software to be used for accessing the FTP server.

FTP server
A server to be used to transfer files via a network.

HTTP port
A port used to communicate between the web server and the web client such as a web browser.

IP address
Abbreviation for Internet Protocol Address. An individual IP address is basically assigned to each piece of equipment connected to the Internet.

I-picture interval
The interval between I-pictures in Moving Picture Experts Group (MPEG). I-picture means the decoding picture without using the other picture's information.

Java applet
A program written in Java language that can be used in the Web browser.

Java Virtual Machine
Software that transfers the Java applet's byte code to the native code of your system to execute it.

JPEG
Abbreviation for Joint Photographic Expert Group. The still image compression technology or standards of the ISO (International Organization for Standardization) and ITU-T. Popularly used as image compression format on the Internet, etc.
**MAC address**
A network address that uniquely identifies each LAN card.

**MPEG4**
Abbreviation for Moving Picture Experts Group 4. One of the MPEG standards for image compression format aiming to transmit images at a high compression rate with lower picture quality.

**Multicast**
The class D IP address assigned between 224.0.0.0 and 239.255.255.255. Using this IP address enables you to transmit the same data to multiple equipment.

**Network address**
The portion that identifies the local network (subnet) in an IP address.

**Network bandwidth**
Bit rate that can be used for networking.

**NTP server**
Network time server that transmits and receives time information over the networks.

**Passive mode**
The mode whereby a client FTP allows TCP connection for data transmission to the FTP server.

**POP server**
A server for storing incoming e-mail until you have read it.

**PPPoE**
A protocol to enable use of the point-to-point protocol (PPP) via the Ethernet.

**Primary DNS server**
One of the DNS servers that can first reply to a request by connected devices or other DNS servers.

**Proxy server**
A server or software that acts as an intermediary between a local network and the Internet so that it can connect to the Internet in place of a computer on a local network.

**Saturation**
The degree to which the color is pure.

**Secondary DNS Server**
Subsidiary DNS server used when a primary DNS server cannot be used.

**SMTP server**
A server for sending or relaying e-mail messages between servers.

**SNMP**
A protocol for monitoring and managing network devices.

**Subnet mask**
32-bit stream used to distinguish the subnet address from the IP address.

**TCP**
Abbreviation for Transmission Control Protocol. A standard protocol used for the Internet connection. Compared with the other protocol, UDP, TCP provides reliable communication but the communication speed is slower.

**UDP**
Abbreviation for User Datagram Protocol. A standard protocol used for the Internet connection. Compared with the other protocol, TCP, UDP can transmit data faster, but reliable communication is not guaranteed.

**Unicast**
Transmission of the data to the specified equipment on a network by specifying a single address.
