Owner’s Record
The model and serial numbers are located on the bottom.
Record the serial number in the space provided below.
Refer to these numbers whenever you call upon your Sony dealer regarding this product.
Model No. SLT-A57
Serial No. __________________________

IMPORTANT SAFETY INSTRUCTIONS
SAVE THESE INSTRUCTIONS.

DANGER - TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, CAREFULLY FOLLOW THESE INSTRUCTIONS.

If the shape of the plug does not fit the power outlet, use an attachment plug adaptor of the proper configuration for the power outlet.

WARNING
To reduce fire or shock hazard, do not expose the unit to rain or moisture.

Battery pack
If the battery pack is mishandled, the battery pack can burst, cause a fire or even chemical burns. Observe the following cautions.
• Do not disassemble.
• Do not crush and do not expose the battery pack to any shock or force such as hammering, dropping or stepping on it.
• Do not short circuit and do not allow metal objects to come into contact with the battery terminals.
• Do not expose to high temperature above 60°C (140°F) such as in direct sunlight or in a car parked in the sun.
• Do not incinerate or dispose of in fire.
• Do not handle damaged or leaking lithium ion batteries.
• Be sure to charge the battery pack using a genuine Sony battery charger or a device that can charge the battery pack.

Caution
Keep the battery pack out of the reach of small children.
Keep the battery pack dry.
Replace only with the same or equivalent type recommended by Sony.
Dispose of used battery packs promptly as described in the instructions.

Battery charger
Even if the CHARGE lamp is not lit, the battery charger is not disconnected from the AC power source (mains) as long as it is connected to the wall outlet (wall socket). If some trouble occurs while using the battery charger, immediately shut off the power by disconnecting the plug from the wall outlet (wall socket).

The power cord (mains lead), if supplied, is designed specifically for use with this camera only, and should not be used with other electrical equipment.

For Customers in the U.S.A. and Canada

RECYCLING LITHIUM-ION BATTERIES
Lithium-Ion batteries are recyclable. You can help preserve our environment by returning your used rechargeable batteries to the collection and recycling location nearest you.

For more information regarding recycling of rechargeable batteries, call toll free 1-800-822-8837, or visit http://www.rbrc.org/

Caution: Do not handle damaged or leaking Lithium-Ion batteries.

Battery Pack and lens
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For Customers in the U.S.A.
UL is an internationally recognized safety organization. The UL Mark on the product means it has been UL Listed.

If you have any questions about this product, you may call:
Sony Customer Information Center
1-800-222-SONY (7669)
The number below is for the FCC related matters only.

Regulatory Information

Declaration of Conformity
Trade Name: SONY
Model No.: SLT-A57
Responsible Party: Sony Electronics Inc.
Address:16530 Via Esprillo,
San Diego, CA 92127 U.S.A.
Telephone No.: 858-942-2230

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION
You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.
Note:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The supplied interface cable must be used with the equipment in order to comply with the limits for a digital device pursuant to Subpart B of Part 15 of FCC Rules.

For Customers in Europe

Notice for the customers in the countries applying EU Directives

The manufacturer of this product is Sony Corporation, 1-7-1 Konan Minato-ku Tokyo, 108-0075 Japan. The Authorized Representative for EMC and product safety is Sony Deutschland GmbH, Hedelfinger Strasse 61, 70327 Stuttgart, Germany. For any service or guarantee matters please refer to the addresses given in separate service or guarantee documents.

This product has been tested and found compliant with the limits set out in the EMC Directive for using connection cables shorter than 3 meters (9.8 feet).

Attention
The electromagnetic fields at the specific frequencies may influence the picture and sound of this unit.

Notice
If static electricity or electromagnetism causes data transfer to discontinue midway (fail), restart the application or disconnect and connect the communication cable (USB, etc.) again.
Disposal of Old Electrical & Electronic Equipment (Applicable in the European Union and other European countries with separate collection systems)

This symbol on the product or on its packaging indicates that this product shall not be treated as household waste. Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product. The recycling of materials will help to conserve natural resources. For more detailed information about recycling of this product, please contact your local Civic Office, your household waste disposal service or the shop where you purchased the product.

Disposal of waste batteries (applicable in the European Union and other European countries with separate collection systems)

This symbol on the battery or on the packaging indicates that the battery provided with this product shall not be treated as household waste. On certain batteries this symbol might be used in combination with a chemical symbol. The chemical symbols for mercury (Hg) or lead (Pb) are added if the battery contains more than 0.0005% mercury or 0.004% lead.

By ensuring these batteries are disposed of correctly, you will help prevent potentially negative consequences for the environment and human health which could otherwise be caused by inappropriate waste handling of the battery. The recycling of the materials will help to conserve natural resources.

In case of products that for safety, performance or data integrity reasons require a permanent connection with an incorporated battery, this battery should be replaced by qualified service staff only. To ensure that the battery will be treated properly, hand over the product at end-of-life to the applicable collection point for the recycling of electrical and electronic equipment.

For all other batteries, please view the section on how to remove the battery from the product safely. Hand the battery over to the applicable collection point for the recycling of waste batteries.

For more detailed information about recycling of this product or battery, please contact your local Civic Office, your household waste disposal service or the shop where you purchased the product.
A moulded plug complying with BS 1363 is fitted to this equipment for your safety and convenience.
Should the fuse in the plug supplied need to be replaced, a fuse of the same rating as the supplied one and approved by ASTA or BSI to BS 1362, (i.e., marked with an ⚪ or ⚫ mark) must be used.
If the plug supplied with this equipment has a detachable fuse cover, be sure to attach the fuse cover after you change the fuse. Never use the plug without the fuse cover. If you should lose the fuse cover, please contact your nearest Sony service station.

Notes on using your camera

Shooting procedure
- This camera has 2 modes for monitoring subjects: the LCD screen mode using the LCD screen, and the viewfinder mode using the viewfinder.
- The recorded image may be different from the image you monitored before recording.

Notes on the functions available with the camera
- To check whether it is a 1080 60i-compatible device or 1080 50i-compatible device, check for the following marks on the bottom of the camera.
  1080 60i-compatible device:60i
  1080 50i-compatible device:50i
- This camera is compatible with 1080 60p or 50p-format movies. Unlike standard recording modes up to now, which record in an interlacing method, this camera records using a progressive method. This increases the resolution, and provides a smoother, more realistic image.
- You may feel uncomfortable symptoms such as eyestrain, nausea, or a tired feeling while watching 3D-images recorded with the camera on 3D-compatible monitors. When you watch 3D-images, we recommend that you take a break at regular time intervals. Since the need for or frequency of break times varies among individuals, please set your own standards. If you feel sick, stop watching 3D-images, and consult a doctor as needed. Also, refer to the operating instructions of the connected device or the software used with the camera. A child’s vision is always vulnerable (especially for children under 6 years of age). Before allowing them to watch 3D-images, please consult with an expert, such as a pediatric or ophthalmic doctor. Be sure to make sure your children follow the precautions above.

No compensation for contents of the recording
The contents of the recording cannot be compensated for if recording or playback is not possible due to a malfunction of your camera or a memory card, etc.

Back up recommendation
To avoid the potential risk of data loss, always copy (back up) data to other medium.

Notes on the LCD screen, electronic viewfinder, lens, and image sensor
- The LCD screen and electronic viewfinder are manufactured using extremely high-precision technology so over 99.99% of the pixels are operational for effective use. However, there may be some tiny black points and/or bright points (white, red, blue or green in color) that constantly appear on the LCD screen and electronic viewfinder. These points are normal in the manufacturing process and do not affect the images in any way.
- Do not hold the camera by taking hold of the LCD screen.
- Do not expose the camera to sunlight or shoot sunward for a long time. The internal mechanism may be damaged. If sunlight is focused on a nearby object, it may cause a fire.
- There is a magnet on the back and around the rotating shaft of the hinge part of the LCD screen. Do not bring anything that is easily affected by a magnet, such as floppy disk, credit cards near the LCD screen.
- Images may trail across on the screen in a cold location. This is not a malfunction. When turning on the camera in a cold location, the screen may become temporarily dark. When the camera warms up, the screen will function normally.

Notes on long-time recording
- When you continue to shoot for a long time, the temperature of the camera rises.
Notes on using your camera

If the temperature reaches above a certain level, the [12] mark is indicated on the screen and the camera is turned off automatically. If the power is turned off, leave the camera for 10 minutes or longer to allow the temperature inside the camera to decrease to a safe level.

- Under high ambient temperatures, the temperature of the camera rises quickly.
- When the temperature of the camera rises, the image quality may deteriorate. It is recommended that you wait until the temperature of the camera drops before continuing to shoot.
- The surface of the camera may get warm. This is not a malfunction.

Notes on importing AVCHD movies to a computer

When importing AVCHD movies to a computer, for Windows computers, use the “PlayMemories Home” software on the CD-ROM (supplied).

Notes when playing movies on other devices

- This camera uses MPEG-4 AVC/H.264 High Profile for AVCHD format recording. Movies recorded in AVCHD format with this camera cannot be played with the following devices.
  - Other devices compatible with AVCHD format that does not support High Profile
  - Devices incompatible with the AVCHD format

This camera also uses MPEG-4 AVC/H.264 Main Profile for MP4 format recording. For this reason, movies recorded in MP4 format with this camera cannot be played on devices other than those that support MPEG-4 AVC/H.264.

- Discs recorded with HD image quality (high definition) can be played back only on AVCHD format-compatible devices. DVD-based players or recorders cannot play back HD image quality discs, as they are incompatible with the AVCHD format. Also, DVD-based players or recorders may fail to eject HD image quality discs.

- 1080 60p/50p movies can be played back on compatible devices only.

Warning on copyright

Television programs, films, videotapes, and other materials may be copyrighted. Unauthorized recording of such materials may be contrary to the provisions of the copyright laws.

The pictures used in this manual

The photographs used as examples of pictures in this manual are reproduced images, and are not actual images shot using this camera.

On the data specifications described in this manual

The data on performance and specifications is defined under the following conditions, except as described in this manual: at an ordinary ambient temperature of 25°C (77°F), and using a battery pack that is charged for about 1 hour after the CHARGE lamp goes out.

Model name

This manual covers several models supplied with different lenses. The model name varies depending on the supplied lens. The available model varies depending on the countries/regions.

Checking the supplied items

First check the model name of your camera (page 10). The accessories supplied differ depending on the model. The number in parentheses indicates the number of pieces.

**Common accessories**

- Camera (1)
- BC-VM10A Battery charger (1)
- Power cord (mains lead) (1) (not supplied in the U.S.A. and Canada)
- Rechargeable battery pack NP-FM500H (1)
- USB cable (1)
- Shoulder strap (1)
- Body cap (1) (Attached on the camera)
- Eyecup (1) (Attached on the camera)
- CD-ROM (1)
  – Application Software for α camera
  – α Handbook
- Instruction Manual (1) (This manual)

**SLT-A57K**

- DT18-55mm zoom lens (1)/Front lens cap (1)/Packaging lid (1)

**SLT-A57Y**

- DT18-55mm zoom lens (1)/Front lens cap (1)/Packaging lid (1)
- DT55-200mm zoom lens (1)/Front lens cap (1)/Rear lens cap (1)/Lens hood (1)
Identifying parts

See the pages in parentheses for details of operation.

Front side

1. Shutter button (30)
2. Power switch (26)
3. Control dial
4. Remote sensor (45)
5. Self-timer lamp (45)
6. Lens contacts*
7. Mirror*
8. Preview button (52)/Focus Magnifier button (52)
9. Mount
10. Built-in flash* (41)
11. Microphone**
12. Mode dial (36)
13. $ (Flash pop-up) button (41, 52)
14. Mounting index (23)
15. Lens release button (24)
16. Focus mode switch (52)

* Do not directly touch these parts.
** Do not cover this part during movie recording. Doing so may cause noise or lower the volume.

9. For shooting: AEL (AE lock) button (52, 59)/AV (Aperture value) button (52)
   For viewing:  (Zoom out) button (49)/  (Image index) button (50)
**Identifying parts**

**Preparing the camera**

**A** Hooks for shoulder strap
- Attach both ends of the strap onto the camera.

**B** REMOTE terminal
- When connecting the RM-L1AM Remote Commander (sold separately) to the camera, insert the plug of the Remote Commander into the REMOTE terminal, aligning the guide of the plug with the guide of the REMOTE terminal. Make sure that the cord of the Remote Commander faces forward.

**C** Speaker

**D** DC IN terminal
- When connecting the AC-PW10AM AC Adaptor (sold separately) to the camera, turn the camera off, then plug the connector of the AC Adaptor to the DC IN terminal on the camera.

**E** Microphone jack
- When an external microphone is connected, the internal microphone is turned off automatically. When the external microphone is a plug-in-power type, the power of the microphone is supplied by the camera.

**F** HDMI mini terminal (51)

**G** (USB) terminal

**H** Access lamp (21)

**I** Memory card insertion slot (20)

**J** Memory card cover (20)
Identifying parts

11 Battery insertion slot (20)
12 Battery cover (20)
13 Tripod receptacle

- Use a tripod with a screw length of less than 5.5 mm (7/32 inch). You will be unable to firmly secure the camera to tripods with a screw length of 5.5 mm (7/32 inch) or longer, and attempting to do so may damage the camera.
Identifying parts

Lens

DT 18-55mm F3.5-5.6 SAM
(Supplied with the SLT-A57K/A57Y)

1. Focusing ring
2. Zoom ring
3. Focal-length scale
4. Focal-length index
5. Lens contacts
6. Focusing mode switch
7. Mounting index

DT 55-200mm F4-5.6 SAM
(Supplied with the SLT-A57Y)

- The DT 18-55mm F3.5-5.6 SAM/DT 55-200mm F4-5.6 SAM are designed for Sony A-mount cameras (models equipped with an APS-C sized image sensor). You cannot use these lenses on 35mm-format cameras.
- For the lenses other than DT 18-55mm F3.5-5.6 SAM/DT 55-200mm F4-5.6 SAM, refer to the operating instructions supplied with the lens.
Charging the battery pack

When using the camera for the first time, be sure to charge the NP-FM500H “InfoLITHIUM” battery pack (supplied). The “InfoLITHIUM” battery pack can be charged even when it has not been fully depleted. It can also be used when it has not been fully charged. The battery pack is discharged little by little, even when you do not use it. To avoid missing an opportunity to shoot, check the remaining battery level before you shoot. If the battery level is low, charge it again.

1 Insert the battery pack onto the battery charger.
   Push the battery pack until it clicks.
2 Connect the battery charger to the wall outlet (wall socket).

Light on: Charging
Light off: Charge completed

| Charging time | About 175 minutes |

- When charging a fully depleted battery pack at a temperature of 25°C (77°F).
- The CHARGE lamp turns off when charging is completed.

Notes
- The charging time differs depending on the remaining capacity of the battery pack or charging conditions.
- We recommend charging the battery pack in an ambient temperature of between 10°C to 30°C (50°F to 86°F). You may not be able to efficiently charge the battery pack outside of this temperature range.
- Connect the battery charger to the nearest wall outlet (wall socket).
Inserting the battery pack/memory card (sold separately)

1 While sliding the battery cover open lever, open the cover.

2 Firmly insert the battery pack all the way while pressing the lock lever with the tip of the battery.

3 Close the cover.

4 While sliding the memory card cover, open the cover.
5 **Insert a memory card.**
   - With the notched corner facing as illustrated, insert the memory card until it clicks into place.

6 **Close the cover.**

**To remove the battery pack**

Turn off the camera. Slide the lock lever in the direction of the arrow 10 seconds after turning off the camera, then remove the battery pack. Be careful not to drop the battery pack.

**To remove the memory card**

Check that the access lamp is not lit, then open the cover, and push the memory card once.

**To check the remaining battery level**

The supplied battery pack is a lithium-ion battery pack that has functions for exchanging information related to operating conditions with your camera. The remaining battery time in percent figures is displayed according to the operating conditions of your camera.
Inserting the battery pack/memory card (sold separately)

- MultiMediaCard cannot be used.

Note
- Images recorded on an SDXC memory card cannot be imported to or played on computers or AV devices that are not compatible with exFAT. Make sure that the device is compatible with exFAT before connecting it to the camera. If you connect your camera to an incompatible device, you may be prompted to format the card. Never format the card in response to this prompt, as doing so will erase all data on the card. (exFAT is the file system used on SDXC memory cards.)
Attaching a lens

1 Remove the body cap from the camera and the packaging lid from the rear of the lens.
   - When changing the lens, quickly change the lens away from dusty locations so as to keep dust or debris from getting inside the camera.
   - When shooting, remove the front lens cap from the front of the lens.

2 Mount the lens by aligning the orange index marks (mounting indexes) on the lens and camera.

3 Turn the lens clockwise until it clicks into the locked position.
   - Be sure to put the lens on straight.

Notes
- When attaching a lens, do not press the lens release button.
- Do not use force when attaching a lens.
- E-mount lenses are not compatible with this camera.
- When you use a lens for which a tripod socket is provided, attach the lens onto the tripod using the tripod socket provided to help balance the weight of the lens.
- When carrying the camera with a lens attached, hold both the camera and the lens firmly.
• Do not hold the part of the lens that is extended for the zoom or focus adjustment.

To remove the lens

1 Press the lens release button all the way in and turn the lens counterclockwise until it stops.

2 Attach the caps to the front and rear of the lens and the body cap to the camera.
   • Before you attach them, remove dust from them.
   • A rear lens cap is not supplied with the DT 18-55mm F3.5-5.6 SAM Lens Kit. When you store the lens without attaching it to the camera, purchase the Rear Lens Cap ALC-R55.

To attach a lens hood

It is recommended that you use a lens hood to reduce flare and ensure maximum image quality.
Fit the hood into the mount on the end of the lens barrel and rotate the hood clockwise until it clicks.

Notes
• A lens hood is not included with the DT 18-55mm F3.5-5.6 SAM. You can use the ALC-SH108 (sold separately).
• The lens hood may block the light of the flash. Remove the lens hood when using the flash.
• When storing, turn over the lens hood and place it onto the lens backwards.

**Note on changing the lens**
When changing the lens, if dust or debris gets inside the camera and adheres to the surface of the image sensor (the part that acts as the film), it may appear as dark spots on the image, depending on the shooting environment.

The camera is equipped with an anti-dust function to prevent dust from landing on the image sensor. However, quickly change the lens away from dusty locations when attaching/removing a lens.
**Turning the camera on and setting the clock**

When you turn the camera on for the first time, the date/time setup screen appears.

1 **Set the power switch to ON to turn the camera on.**
   - The screen used for setting date and time appears.
   - To turn the camera off, set it to OFF.

2 **Verify that [Enter] is selected on the LCD screen, then press the center of the control button.**

3 **Select your area with </> on the control button, then press the center of the control button.**

4 **Select each item with </> and set the numeric value with ▲/▼.**
   - **[Daylight Svgs.]:** Turns on or off the daylight saving time setting.
   - **[Date Format]:** Selects the format to display date.
     - Midnight is indicated as 12:00 AM, and noon as 12:00 PM.
5 Repeat step 4 to set other items, then press the center of the control button.

6 Verify that [Enter] is selected, then press the center of the control button.

To cancel the date/time setting operation
Press the MENU button.

To set up the date/time again
When you turn the camera on for the first time, the date/time setup screen appears automatically. The next time, set up the date and time from the menu.

MENU button → 1 → [Date/Time Setup]

To set up the area again
You can set the area where you are using the camera. This allows you to set the local area when you use the camera abroad.

MENU button → 1 → [Area Setting]

Maintaining the date and time setting
This camera has an internal rechargeable battery for maintaining the date and time and other settings regardless of whether the power is on or off, or the battery is installed or not.
Before shooting

Adjusting the viewfinder to the visual acuity (diopter adjustment)

Adjust the diopter-adjustment dial to your eyesight until the display appears clearly in the viewfinder.

- If you cannot see the entire screen in the viewfinder, you can change the scale of the viewfinder screen (page 58).

Note
- The dioptic adjustment attachment (sold separately) cannot be used with this camera.

Holding the camera properly

Stabilize your upper body and take a position that keeps the camera from moving.

In LCD screen mode  In viewfinder mode  In viewfinder mode (vertical position)

Point ①
One hand holds the grip of the camera, and the other hand supports the lens.

Point ②
Take a secure stance with your feet shoulder-width apart.
Point ③
Lightly tuck your elbows against your body.
When shooting in a kneeling position, steady your upper body by placing your elbow on your knee.
Shooting still images

The “Intelligent Auto” mode allows you to easily shoot any subject under any conditions because the camera makes appropriate judgments on the situation to adjust the settings. Select when shooting in a location where the use of a flash is restricted.

1 Set the mode dial to or (Flash Off).

2 Hold the camera, monitoring your shot with the LCD screen or viewfinder.

3 Overlay the AF area on the desired subject.
   • If the (Camera shake warning) indicator flashes, carefully shoot the subject, holding the camera steady, or by using a tripod.
   • When the camera recognizes the scene, the Scene Recognition icon appears on the screen and suitable settings for that scene will be put into effect.

4 When using a zoom lens, turn the zoom ring, then decide on your shot.
5 Press the shutter button halfway down to focus.

When the focus is confirmed, ⬤ or ⬤ (Focus indicator) lights up.

6 Press the shutter button fully down to shoot.

- When the camera detects and shoots a face with [Auto Port. Framing] set to [Auto], the captured image is automatically trimmed into a suitable composition. Both the original and the trimmed images are saved (page 54).
Recording movies

1 Press the MOVIE button to start recording.

• Movie recording can be started from any exposure mode.
• The shutter speed and aperture are adjusted automatically. If you want to set them to particular values, set the mode dial to [Movie] (page 36).
• The camera continues to adjust the focus when it is in autofocus mode.

2 Press the MOVIE button again to stop recording.

Notes

• The sound of the camera and the lens in operation may be recorded while recording a movie. You can disable sound recording by setting [Audio Recording] to [Off] (page 57).
• The continuous recording time of a movie may be shorter, depending on the ambient temperature or the status of the camera. See “Notes on continuous movie recording.”
• When the [I] mark is indicated, the temperature of the camera is too high. Turn the camera off and wait until the temperature of the camera drops.
Playing back images

1 Press the ➤ button.

2 MENU button ➔ ➤ 1 ➔ [View Mode] ➔ Select the desired mode

- To play back still images, select [Folder View(Still)], and to play back movies, select [Folder View(MP4)] or [AVCHD View] according to the file format.

3 Select an image with ◀/▶ on the control button.

- To play back movies, press the center of the control button.

<table>

  • The movie is played back frame-by-frame. |
| To adjust sound volume      | ▼ ➔ ▲/▼                               |
| To display the information  | ▲                                     |

Note
- Movies recorded with other devices may not be played back on this camera.
Deleting images (Delete)

Once you have deleted an image, you cannot restore it. Check whether to delete the image or not beforehand.

Note
• Protected images cannot be deleted.

Deleting the image that is currently displayed

1 Display the image you want to delete and press the删除 button.

2 Select [Delete] with ▲ on the control button, then press the center of the control button.
Adjusting the angle of the LCD screen

Adjust the LCD screen to an easily viewable angle.

- The LCD screen tilts 180 degrees.
- The LCD screen can be rotated leftward 270 degrees from the position in which the LCD screen is facing forward.
- When the LCD screen is not used, it is recommended that you close it with the screen side facing to the camera.

Note

- When the LCD screen is open, the eye sensor may not be able to function in situations involving low-position shooting. If you look into the viewfinder and the monitor is not switched automatically, press the FINDER/LCD button.
Shooting with the various shooting modes

Set the mode dial to the desired mode.

The following shooting modes are provided with the camera:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>

</tr>
<tr>
<td>(Night Portrait)</td>
<td>Shoots portraits in night scenes.</td>
</tr>
</tbody>
</table>
Shooting with the various shooting modes

Sweep Panorama/ 3D 3D Sweep Panorama

1 Set the mode dial to (Sweep Panorama)/ 3D (3D Sweep Panorama).

2 Point the camera at the edge of the subject, then press the shutter button halfway down to adjust the focus.

3 Press the shutter button fully down.

4 Pan or tilt the camera to the end, following the guidance on the screen.
Shooting with the various shooting modes

Continuous Advance Priority AE Mode

1 Set the mode dial to (Cont. Priority AE Mode).

2 Select the desired mode with ▲/▼ on the control button, then press the center ● on the control button.
   • To change the mode, press the Fn button, then select another mode.

3 Adjust the focus and shoot the subjects.
   • The camera continues to shoot while the shutter button is pressed fully down.

| T | (Tele-zoom Cont. Priority AE) | The camera records the images continuously at a maximum of about 12 images per second.
   |                             | • The minimum zoom scale of the camera is set to 1.4 times and the image size can be set to M or S. |
| L | (Cont. Priority AE)          | The camera records the images continuously at a maximum of about 10 images per second. The image size can be set to L. |
Using the flash

In a dark location, using the flash allows you to shoot the subject brightly, and it also helps to prevent camera shake. When shooting into the sun, you can use the flash to shoot a bright image of the backlit subject.

1 **Fn button → £ (Flash Mode) → Select the desired setting**
   
   • For further information on the flash modes available for each shooting mode, see page 77.

2 **Press the £ button.**

   The flash pops up.
   
   • In Intelligent Auto, Superior Auto or Scene Selection mode, the flash automatically pops up if the amount of light is insufficient or the subject is backlit. The built-in flash does not pop up even if you press the £ button.

3 **After the flash has finished charging, shoot the subject.**

   • Flashing: The flash is being charged. When the indicator flashes, you cannot release the shutter.
   • Lit: The flash has been charged and is ready to fire.
   • When you press the shutter button halfway down under dark lighting in autofocus mode, the flash may be fired to help focus on a subject (AF Illuminator).
Using the flash

<table>
<thead>
<tr>
<th>Flash Mode</th>
<th>Description</th>
</tr>
</thead>
</table>
| ✱ (Flash Off) | Does not fire even the built-in flash pops up.  
• You cannot select this item when the mode dial is set to P, A, S, or M. However, the flash will not be fired if it is not pulled up. |
| ♀ AUTO (Autoflash) | Fires if it is dark or against light. |
| ♀ (Fill-flash) | Fires every time you trigger the shutter. |
| ♀ SLOW (Slow Sync.) | Fires every time you trigger the shutter. Slow sync shooting allows you to shoot a clear image of both the subject and the background by slowing the shutter speed. |
| ♀ REAR (Rear Sync.) | Fires right before the exposure is completed every time you trigger the shutter. |
| ♀ WL (Wireless) | Fires an external flash (sold separately) that is off the camera and away from it (Wireless flash shooting). |
Adjusting the brightness of the image

Except for exposure mode M, the exposure is automatically selected (Automatic exposure).
Based on the exposure acquired by the automatic exposure, you can perform exposure compensation. You can make the entire image brighter by shifting to the + side. The entire image becomes darker when you shift it to the – side (Exposure compensation).

1 Press the button.

2 Adjust the exposure with the control dial.
   Toward + (over): Brightens an image.
   Toward – (under): Darkens an image.
   • In viewfinder mode, confirm the exposure using the EV scale.

3 Adjust the focus and shoot the subject.

Shooting techniques

• Adjust the compensation level by checking the recorded image.
• Using bracket shooting, you can shoot multiple images with the exposure shifted to the plus or minus sides (page 45).

**Note**
• This item cannot be set when the exposure mode is set to Intelligent Auto, Superior Auto, or Scene Selection.
Selecting the drive mode

You can use an appropriate drive mode to suit your purposes, such as single-shot advanced, continuous advanced, or bracket.

Select the desired mode

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(Single Shooting)</td>
<td>This mode is for normal shooting.</td>
</tr>
<tr>
<td>(Cont. Shooting)</td>
<td>The camera records the images continuously.</td>

<td>Based on the selected white balance, and the color temperature/color filter, 3 images are recorded with the white balance shifted.</td>
</tr>
<tr>
<td>(Remote Cdr.)</td>
<td>You can shoot using the SHUTTER and 2SEC (the shutter is released after 2 seconds) buttons on the RMT-DSLR1 Wireless Remote Commander (sold separately).</td>
</tr>
</tbody>
</table>
Switching the recording information display (DISP)

Each time you press DISP on the control button, the recording information display changes as follows.
You can select the available displays in the viewfinder or on the LCD screen separately.

**Graphic Display**
The Graphic Display shows the shutter speed and aperture value as graphs, and clearly illustrates how the exposure works. The pointers on the shutter speed indicator and aperture indicator indicate the current value.
Setting image size

Enlarging images

A still image can be enlarged for closer examination. This is convenient to check the focus condition of a recorded image.

1 Display the image you want to enlarge, then press the + button.

2 Zoom the image in or out with the + button or - button.
   - Rotating the control dial switches the image at the same display magnification. When you shoot multiple images with the same composition, you can compare their focus conditions.

3 Select the portion you want to enlarge with ▲/▼/◄/► on the control button.

To cancel the enlarged playback
Press the center of the control button so that the image returns to the normal size.
Switching to the display of the image list

You can display multiple images on the screen simultaneously.

Press the  button.
The image index screen is displayed.
• You can select the number of images displayed on one page of the image index screen using [Image Index] in the Playback menu.

To return to the single-image screen
Press the center of the control button when you select the desired image.

To display the desired folder
Select the left bar on the image index screen with the control button, then select the desired folder with ▲/▼. Pressing the center of the control button when the left bar is selected switches the view mode.
Viewing images on a TV screen

To view images recorded on the camera on a TV set, an HDMI cable (sold separately) and an HD TV equipped with an HDMI connector are required.

1 Turn off both your camera and the TV, and connect the camera to the TV.

2 Turn on the TV and switch the input.
   • See also the operating instructions supplied with the TV.

3 Turn on the camera, and press the button.
   Images shot with the camera appear on the TV screen.
   Select the desired image with ◀/▶ on the control button.
   • The LCD screen on the camera does not turned on.
# Functions that can be operated with the buttons/switch

You can set up or operate various functions with these buttons/switch. For the location of the buttons/switch, see “Identifying parts” (page 12).

<table>

Selecting a function with the Fn (Function) button

This button is used for setting up or executing functions used frequently in shooting.

1 Press the Fn button.

2 Select the desired item with ▲▼◄► on the control button, then press the center ● to execute.
   The setup screen appears.

3 Following the operation guide, select and execute the desired function.

To set up the camera directly from the recording information screen
Turn the control dial without pressing the center ● in step 2. You can set up the camera directly from the recording information screen.
## Functions that can be selected with the Fn (Function) button

* Appears when an Eye-Fi card (sold separately) is inserted in the camera.
Using the guide function of the camera

In-Camera Guide

When you press the ? (In-Camera Guide) button on the Fn screen or menu screen, a guide in accordance with the currently selected function or setting appears automatically.
Select unavailable functions or settings on the Fn screen, then press the center of the control button, the appropriate setup is indicated in order to enable them.

Shooting Tip

The camera displays the shooting tips in accordance with the shooting mode selected.

1 Press the ? (In-Camera Guide) button when the recording information display is displayed.

A shooting tip list in accordance with the current subject appears automatically.

2 Select the desired shooting tip with ▲/▼ on the control button, then press the center of the control button.

The shooting tip is displayed.
- You can scroll the screen with ▲/▼.
- You can select the item with ◀/▶.

To access all shooting tips
You can search through all the shooting tips from the menu. Use this item when you want to read shooting tips you have seen before.
Using the guide function of the camera

MENU button → 3 → [Shooting Tip List] → Select the desired shooting tip
Using with your computer

Following applications are contained on the CD-ROM (supplied) to allow more versatile use of images shot with your camera.

- **“Image Data Converter”**
  You can open RAW format image files.

- **“PlayMemories Home”**
  You can import still images or movies recorded with the camera to your computer so that you can view them, and use various convenient features to enhance the images you have shot.

For detailed notes on installation, also see page 67.

Notes
- Use “Image Data Converter” to play back RAW images.
- “PlayMemories Home” is not compatible with Mac computers. When you play back images on Mac computers, use the appropriate application software supplied with the Mac computer.

Recommended computer environment (Windows)

The following computer environment is recommended when using the supplied software and importing images via a USB connection.

<table>
<thead>
<tr>
<th>OS (pre-installed)</th>
<th>Microsoft Windows XP* SP3/Windows Vista** SP2/Windows 7 SP1</th>
</tr>
</thead>
<tbody>
<tr>
<td>“PlayMemories Home”</td>
<td>CPU: Intel Pentium III 800 MHz or faster</td>
</tr>
<tr>
<td></td>
<td>(For playing/editing the High Definition movies: Intel Core Duo 1.66 GHz or faster/Intel Core 2 Duo 1.66 GHz or faster, Intel Core 2 Duo 2.26 GHz or faster (AVC HD (FX/FH)), Intel Core 2 Duo 2.40 GHz or faster (AVC HD (PS)))</td>
</tr>
<tr>
<td></td>
<td>Memory: Windows XP 512MB or more (1 GB or more is recommended), Windows Vista/Windows 7 1 GB or more</td>
</tr>
<tr>
<td></td>
<td>Hard Disk: Disk space required for installation-approximately 500 MB</td>
</tr>
<tr>
<td></td>
<td>Display: Screen resolution-1024 × 768 dots or more</td>
</tr>
<tr>
<td>“Image Data Converter Ver.4”</td>
<td>CPU/Memory: Pentium 4 or faster/1 GB or more</td>
</tr>
<tr>
<td></td>
<td>Display: 1024 × 768 dots or more</td>
</tr>
</tbody>
</table>

* 64-bit editions and Starter (Edition) are not supported. Windows Image Mastering API (IMAPI) Ver.2.0 or later is required to use the function for creating discs.
** Starter (Edition) is not supported.

**Recommended computer environment (Mac)**

The following computer environment is recommended when using the supplied software and importing images via a USB connection.

<table>
<thead>
<tr>
<th>OS (pre-installed)</th>
<th>USB Connection:</th>
<th>CPU:</th>
<th>Memory:</th>
<th>Display:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mac OS X v10.3 – 10.7</td>
<td>“Image Data Converter Ver.4”: Mac OS X v10.5, 10.6 (Snow Leopard), 10.7 (Lion)</td>
<td>Intel Core Solo/Core Duo/Core 2 Duo or faster</td>
<td>1 GB or more is recommended.</td>
<td>1024 × 768 dots or more</td>
</tr>
</tbody>
</table>

**Notes**

- Operation is not assured in an environment based on an upgrade of the operating systems described above or in a multi-boot environment.
- If you connect 2 or more USB devices to a single computer at the same time, some devices, including the camera, may not operate, depending on the types of USB devices you are using.
- Connecting the camera using a USB interface that is compatible with Hi-Speed USB (USB 2.0 compliant) allows advanced transfer (high speed transfer), as the camera is compatible with Hi-Speed USB (USB 2.0 compliant).
- When your computer resumes activity from suspend or sleep mode, communication between the camera and your computer may not recover at the same time.
Using the software

Installing the software (Windows)

Log on as Administrator.

1 Turn on your computer, and insert the CD-ROM (supplied) into the CD-ROM drive.

The installation menu screen appears.

- If it does not appear, double-click [Computer] (For Windows XP: [My Computer]) → (PMHOME) → [Install.exe].
- If the AutoPlay screen appears, select “Run Install.exe” and follow the instructions that appear on the screen to proceed with the installation.

2 Click [Install].

Make sure that both “Image Data Converter” and “PlayMemories Home” are checked and follow the instructions on the screen.

- Connect the camera to the computer during the procedure following the instructions on the screen.
- When the restarting confirmation message appears, restart the computer following the instructions on the screen.
- DirectX may be installed depending on the system environment of your computer.

3 Remove the CD-ROM after the installation is complete.

The following software is installed and shortcut icons appear on the desktop.

“Image Data Converter”
“PlayMemories Home”
“PlayMemories Home Help Guide”

Note

- If “PMB” (Picture Motion Browser) supplied with a camera that was purchased before 2011 has already been installed on the computer, “PMB” is overwritten by “PlayMemories Home,” and you may be unable to use some functions of “PMB.”
Installing the software (Mac)

Log on as Administrator.

1 Turn on your Mac computer, and insert the CD-ROM (supplied) into the CD-ROM drive.

2 Double-click the CD-ROM icon.

3 Copy the [IDC_INSTALL.pkg] file in the [MAC] folder to the hard disk icon.

4 Double-click the [IDC_INSTALL.pkg] file in the copy-to folder.
   Follow the instructions on the screen to complete the installation.

Using “Image Data Converter”

With “Image Data Converter” you can do the following, etc.:
• To edit images recorded in RAW format with various corrections, such as tone curve, and sharpness.
• To adjust images with white balance, exposure, and creative style, etc.
• To save the images displayed and edited on a computer.
   You can either save the image as RAW format or save it in the general file format.
• To display and compare RAW/JPEG images recorded with this camera.
• To rate the images on a scale of five.
• To set color labels.
To use “Image Data Converter,” refer to Help.
Click [Start] → [All Programs] → [Image Data Converter] → [Help] →
[Image Data Converter Ver.4].

Using “PlayMemories Home”

With “PlayMemories Home” you can do the following, etc.:
• To set images shot with the camera and display them on the computer.
Using the software

• To organize images on the computer on a calendar by shooting date to view them.
• To retouch (red-eye reduction, etc.), print, send still images as e-mail attachments, and change the shooting date.
• To print or save still images with the date.
• To create Blu-ray discs or DVD discs from AVCHD movies imported to a computer. (An Internet connection environment is required when a Blu-ray disc/DVD disc is created for the first time.)

Notes
• “PlayMemories Home” is not compatible with Mac computers. When you play back images on Mac computers, use the appropriate application software supplied with the Mac computer.
• Movies recorded with the [60p 28M(PS)]/[50p 28M(PS)], [60i 24M(FX)]/[50i 24M(FX)] or [24p 24M(FX)]/[25p 24M(FX)] setting in [Record Setting] are converted by “PlayMemories Home” in order to create an AVCHD recording disc. This conversion can take a long time. Also, you cannot create a disc with the original image quality. If you want to keep the original image quality, you must store your movies on a Blu-ray disc.

To use “PlayMemories Home,” refer to “PlayMemories Home Help Guide.”
Double-click the shortcut of 📚 (PlayMemories Home Help Guide) on the desktop. Or, click [Start] → [All Programs] → [PlayMemories Home] → [PlayMemories Home Help Guide].

“PlayMemories Home” support page (English only)
http://www.sony.co.jp/pmh-se/
Selecting the method for creating a disc of movies

You can create a disc from AVCHD movies that have been recorded with this camera. Depending on the disc type, playable devices may vary. Select the method that suits your disc player. Here, 2 ways of creating a disc of movies are described; creating a disc with a computer using “PlayMemories Home” or creating a disc with devices other than a computer such as a DVD writer.

<table>

* When creating a disc using “PlayMemories Home,” changing the image quality to a lower setting allows you to create a disc.

Creating a disc using a computer

You can import AVCHD movies to a computer using “PlayMemories Home” and create an AVCHD recording disc or a standard definition image quality (STD) disc.
For details on the method for creating a disc using “PlayMemories Home,” see “PlayMemories Home Help Guide.”

Notes
- To create Blu-ray discs with “PlayMemories Home,” you have to install proprietary add-on software. For details, access following URL: http://support.d-imaging.sony.co.jp/BDUW/
- The PlayStation®3 may not be available in some countries/regions.
- Movies recorded with the [60p 28M(PS)][50p 28M(PS)], [60i 24M(FX)][50i 24M(FX)] or [24p 24M(FX)][25p 24M(FX)] setting in [Record Setting] are converted by “PlayMemories Home” in order to create an AVCHD recording disc. This conversion can take a long time. Also, you cannot create a disc with the original image quality. If you want to keep the original image quality, you must store your movies on a Blu-ray disc.
- To play back movies recorded with the [60p 28M(PS)][50p 28M(PS)] setting on a Blu-ray disc, a device compatible with the AVCHD Ver 2.0 format is required.

Creating a disc with a device other than a computer

You can create a disc with a Blu-ray disc recorder and DVD writer. The disc type you can create depends on the device used.

<table>
<thead>
<tr>
<th>Device</th>
<th>Disc type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blu-ray disc recorder: To create a Blu-ray disc or DVD with standard image quality (STD)</td>
<td><strong>Blu-ray</strong> High-definition image quality (HD) <strong>DVD</strong> Standard definition image quality (STD)</td>
</tr>
<tr>
<td>DVD writer other than DVDirect Express: To create an AVCHD recording disc or DVD with standard image quality (STD)</td>
<td><strong>DVD</strong> High-definition image quality (HD) (AVCHD recording disc) <strong>DVD</strong> Standard definition image quality (STD)</td>
</tr>
<tr>
<td>HDD recorder, etc.: To create a DVD with standard image quality (STD)</td>
<td><strong>DVD</strong> Standard definition image quality (STD)</td>
</tr>
</tbody>
</table>
Selecting the method for creating a disc of movies

Notes

- For details on how to create a disc, refer to the operating instructions of the device you use.
- If you create a disc using Sony DVDirect (DVD Writer), use the memory card slot of the DVD Writer or connect the DVD Writer via USB connection to transfer the data.
- If you use Sony DVDirect (DVD Writer), check that the firmware is updated to the newest version. For details, see the following URL: http://sony.storagesupport.com/
- To copy movies recorded with the [60p 28M(PS)]/[50p 28M(PS)] setting to a Blu-ray disc, a device compatible with the AVCHD Ver 2.0 format is required. To play back the created Blu-ray disc, a device compatible with the AVCHD Ver 2.0 format is required.

Learning more about the camera (α Handbook)

“α Handbook,” which explains how to use the camera in detail, is included on the CD-ROM (supplied). Refer to it for in-depth instructions on the many functions of the camera.

For Windows users

1 Turn on your computer, and insert the CD-ROM (supplied) into the CD-ROM drive.

2 Click [Handbook].

3 Click [Install].

4 Start “α Handbook” from the shortcut on the desktop.

For Mac users

1 Turn on your computer, and insert the CD-ROM (supplied) into the CD-ROM drive.

3 After copying is complete, double-click “Handbook.pdf.”
Checking the number of recordable images/recording time

Once you insert a memory card into the camera and set the power switch to ON, the number of images that can be recorded (should you continue to shoot using the current settings) is displayed on the screen.

Notes
• When “0” (the number of recordable images) flashes in yellow, the memory card is full. Replace the memory card with another one, or delete images in the current memory card (pages 34, 60).
• When “NO CARD” (the number of recordable images) flashes in yellow, it means no memory card has been inserted. Insert a memory card.

The number of images that can be recorded on a memory card

The table shows the approximate number of images that can be recorded on a memory card formatted with this camera. The values are defined using Sony standard memory cards for testing. The values may vary depending on the shooting conditions and the type of memory card used.

Image Size: L 16M
Aspect Ratio: 3:2*
“Memory Stick PRO Duo” (Units: Images)

<table>
<thead>
<tr>
<th>Size</th>
<th>Capacity</th>
<th>2GB</th>
<th>4GB</th>
<th>8GB</th>
<th>16GB</th>
<th>32GB</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard</td>
<td>410</td>
<td>820</td>
<td>1650</td>
<td>3350</td>
<td>6700</td>
<td></td>
</tr>
<tr>
<td>Fine</td>
<td>295</td>
<td>590</td>
<td>1150</td>
<td>2400</td>
<td>4800</td>
<td></td>
</tr>
<tr>
<td>RAW &amp; JPEG</td>
<td>80</td>
<td>160</td>

<td>110</td>
<td>220</td>
<td>445</td>
<td>890</td>
<td>1750</td>
<td></td>
</tr>
</tbody>
</table>

* When [Aspect Ratio] is set to [16:9], you can record more images than the numbers shown in the table above (except when [RAW] is selected).
The number of images that can be recorded using a battery pack

The approximate number of images that can be recorded is as follows when you use the camera with the battery pack (supplied) at full capacity. Note that the actual numbers may be less than those indicated depending on the conditions of use.

<table>
<thead>
<tr>
<th>LCD screen mode</th>
<th>Approx. 590 images</th>
</tr>
</thead>
<tbody>
<tr>
<td>Viewfinder mode</td>
<td>Approx. 550 images</td>
</tr>
</tbody>
</table>

- The number is calculated with a battery pack at full capacity and in the following situation:
  - At an ambient temperature of 25°C (77°F).
  - Using the battery pack that is charged for an hour after the CHARGE lamp goes out.
  - Using Sony “Memory Stick PRO Duo” media (sold separately).
  - [Quality] is set to [Fine].
  - [Autofocus Mode] is set to [Automatic AF].
  - Shooting once every 30 seconds.
  - The flash strobes once every 2 times.
  - The power turns on and off once every 10 times.
- The measurement method is based on the CIPA standard. (CIPA: Camera & Imaging Products Association)

Available recording time for a movie

The table below shows the approximate total recording times using a memory card formatted with this camera.

#### Notes
- The recordable time of movies varies for the reason that the camera equipped with VBR (Variable Bit Rate) which automatically adjusts image quality depending on shooting scene. When you record fast-moving subject, the image is clearer but the recordable time is shorter because it spends much memory to record. The recordable time also vary depending on the shooting condition or subject or setting of image quality/size.
- The values shown are not the continuous recording time.
- Recording time may depend on shooting conditions and the memory card used.
- When [tridge] is indicated, stop recording the movie. The temperature inside the camera has increased to an unacceptable level.
- For details on movie playback, see page 33.

#### Notes on continuous movie recording
- It requires a lot of power to perform high quality movie recording or continuous shooting using the APS-C size image sensor. Therefore, if you continue to shoot, the temperature inside the camera will rise, especially that of the image sensor. In such cases, the camera is turned off automatically since higher temperatures affect the quality of the images or burden the internal mechanism of the camera.
- The duration of time available for movie recording is as follows when the camera starts recording after the power of the camera has been turned off for a while. (The
following values indicate the continuous time from when the camera starts recording until the camera stops recording.)

<table>
<thead>
<tr>
<th>Ambient temperature</th>
<th>Continuous recording time for movies</th>
</tr>
</thead>
<tbody>
<tr>
<td>20°C (68°F)</td>
<td>About 29 minutes</td>
</tr>
<tr>
<td>30°C (86°F)</td>
<td>About 29 minutes</td>
</tr>
<tr>
<td>40°C (104°F)</td>
<td>About 13 minutes</td>
</tr>
</tbody>
</table>

- The duration of time available for movie recording varies with the temperature or condition of the camera before you start recording. If you frequently recompose or shoot images after the power is turned on, the temperature inside the camera rises and the recording time available is shorter than the values indicated in the table above.
- If the camera stops recording due to the temperature, leave it for several minutes with the power turned off. Start recording after the temperature inside the camera drops fully.
- If you observe the following points, the recording time is longer.
  – Keep the camera out of direct sunlight.
  – Turn the camera off when it is not being used.
  – If possible, use a tripod and disable the SteadyShot function.
- The maximum size of a movie file is about 2 GB. When the file size is about 2 GB, the recording stops automatically when [File Format] is set to [MP4], and a new movie file is created automatically when [File Format] is set to [AVCHD].
- The maximum continuous recording time is 29 minutes.

</tbody>
</table>

* The values for equivalent 35mm-format focal length and angle of view are based on Interchangeable Lens Digital Camera equipped with an APS-C sized image sensor.

** Minimum focus is the shortest distance from the image sensor to the subject.

- This lens is equipped with a distance encoder. The distance encoder allows more accurate measurement (ADI) by using a flash for ADI.
- Depending on the lens mechanism, the focal length may change with any change of the shooting distance. The focal length assumes the lens is focused at infinity.
- The infinity position provides for some adjustment to compensate for focus shift caused by change in temperature. To shoot a subject at infinite distance in MF mode, use the viewfinder and set focus.

### On focal length

The picture angle of this camera is narrower than that of a 35 mm-format camera. You can find the approximate equivalent of the focal length of a 35 mm-format camera, and shoot with the same picture angle, by increasing the focal length of your lens by half.
For example, by using a 50 mm lens, you can get the approximate equivalent of a 75 mm lens of a 35 mm-format camera.
